

# Package ‘paws.customer.engagement’

September 12, 2024

**Title** 'Amazon Web Services' Customer Engagement Services

**Version** 0.7.0

**Description** Interface to 'Amazon Web Services' customer engagement services, including 'Simple Email Service', 'Connect' contact center service, and more <<https://aws.amazon.com/>>.

**License** Apache License (>= 2.0)

**URL** <https://github.com/paws-r/paws>

**BugReports** <https://github.com/paws-r/paws/issues>

**Imports** paws.common (>= 0.7.5)

**Suggests** testthat

**Encoding** UTF-8

**RoxygenNote** 7.3.2

connect *Amazon Connect Service*

---

## Description

- [Amazon Connect actions](#)
- [Amazon Connect data types](#)

Amazon Connect is a cloud-based contact center solution that you use to set up and manage a customer contact center and provide reliable customer engagement at any scale.

Amazon Connect provides metrics and real-time reporting that enable you to optimize contact routing. You can also resolve customer issues more efficiently by getting customers in touch with the appropriate agents.

There are limits to the number of Amazon Connect resources that you can create. There are also limits to the number of requests that you can make per second. For more information, see [Amazon Connect Service Quotas](#) in the *Amazon Connect Administrator Guide*.

You can connect programmatically to an Amazon Web Services service by using an endpoint. For a list of Amazon Connect endpoints, see [Amazon Connect Endpoints](#).

## Usage

```
connect(config = list(), credentials = list(), endpoint = NULL, region = NULL)
```

## Arguments

config	Optional configuration of credentials, endpoint, and/or region. <ul style="list-style-type: none"> <li>• <b>credentials:</b> <ul style="list-style-type: none"> <li>– <b>creds:</b> <ul style="list-style-type: none"> <li>* <b>access_key_id:</b> AWS access key ID</li> <li>* <b>secret_access_key:</b> AWS secret access key</li> <li>* <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>– <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>– <b>anonymous:</b> Set anonymous credentials.</li> </ul> </li> <li>• <b>endpoint:</b> The complete URL to use for the constructed client.</li> <li>• <b>region:</b> The AWS Region used in instantiating the client.</li> <li>• <b>close_connection:</b> Immediately close all HTTP connections.</li> <li>• <b>timeout:</b> The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.</li> <li>• <b>s3_force_path_style:</b> Set this to <code>true</code> to force the request to use path-style addressing, i.e. <code>http://s3.amazonaws.com/BUCKET/KEY</code>.</li> <li>• <b>sts_regional_endpoint:</b> Set sts regional endpoint resolver to regional or legacy <a href="https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html">https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html</a></li> </ul>
credentials	Optional credentials shorthand for the config parameter <ul style="list-style-type: none"> <li>• <b>creds:</b> <ul style="list-style-type: none"> <li>– <b>access_key_id:</b> AWS access key ID</li> <li>– <b>secret_access_key:</b> AWS secret access key</li> <li>– <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>• <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>• <b>anonymous:</b> Set anonymous credentials.</li> </ul>
endpoint	Optional shorthand for complete URL to use for the constructed client.
region	Optional shorthand for AWS Region used in instantiating the client.

## Value

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the [Operations](#) section.

**Service syntax**

```

svc <- connect(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
        secret_access_key = "string",
        session_token = "string"
      ),
      profile = "string",
      anonymous = "logical"
    ),
    endpoint = "string",
    region = "string",
    close_connection = "logical",
    timeout = "numeric",
    s3_force_path_style = "logical",
    sts_regional_endpoint = "string"
  ),
  credentials = list(
    creds = list(
      access_key_id = "string",
      secret_access_key = "string",
      session_token = "string"
    ),
    profile = "string",
    anonymous = "logical"
  ),
  endpoint = "string",
  region = "string"
)

```

[activate\\_evaluation\\_form](#)  
[associate\\_analytics\\_data\\_set](#)  
[associate\\_approved\\_origin](#)  
[associate\\_bot](#)  
[associate\\_default\\_vocabulary](#)  
[associate\\_flow](#)  
[associate\\_instance\\_storage\\_config](#)  
[associate\\_lambda\\_function](#)  
[associate\\_lex\\_bot](#)  
[associate\\_phone\\_number\\_contact\\_flow](#)  
[associate\\_queue\\_quick\\_connects](#)  
[associate\\_routing\\_profile\\_queues](#)  
[associate\\_security\\_key](#)

Activates an evaluation form in the specified Amazon Connect instance  
 This API is in preview release for Amazon Connect and is subject to change  
 This API is in preview release for Amazon Connect and is subject to change  
 This API is in preview release for Amazon Connect and is subject to change  
 Associates an existing vocabulary as the default  
 Associates a connect resource to a flow  
 This API is in preview release for Amazon Connect and is subject to change  
 This API is in preview release for Amazon Connect and is subject to change  
 This API is in preview release for Amazon Connect and is subject to change  
 Associates a flow with a phone number claimed to your Amazon Connect  
 This API is in preview release for Amazon Connect and is subject to change  
 Associates a set of queues with a routing profile  
 This API is in preview release for Amazon Connect and is subject to change

associate_traffic_distribution_group_user	Associates an agent with a traffic distribution group
associate_user_proficiencies	>Associates a set of proficiencies with a user
batch_associate_analytics_data_set	This API is in preview release for Amazon Connect and is subject to change
batch_disassociate_analytics_data_set	This API is in preview release for Amazon Connect and is subject to change
batch_get_attached_file_metadata	Allows you to retrieve metadata about multiple attached files on an association
batch_get_flow_association	Retrieve the flow associations for the given resources
batch_put_contact	Only the Amazon Connect outbound campaigns service principal is allowed
claim_phone_number	Claims an available phone number to your Amazon Connect instance or trunk
complete_attached_file_upload	Allows you to confirm that the attached file has been uploaded using the preview
create_agent_status	This API is in preview release for Amazon Connect and is subject to change
create_contact_flow	Creates a flow for the specified Amazon Connect instance
create_contact_flow_module	Creates a flow module for the specified Amazon Connect instance
create_evaluation_form	Creates an evaluation form in the specified Amazon Connect instance
create_hours_of_operation	This API is in preview release for Amazon Connect and is subject to change
create_instance	This API is in preview release for Amazon Connect and is subject to change
create_integration_association	Creates an Amazon Web Services resource association with an Amazon Connect
create_participant	Adds a new participant into an on-going chat contact
create_persistent_contact_association	Enables rehydration of chats for the lifespan of a contact
create_predefined_attribute	Creates a new predefined attribute for the specified Amazon Connect instance
create_prompt	Creates a prompt
create_queue	This API is in preview release for Amazon Connect and is subject to change
create_quick_connect	Creates a quick connect for the specified Amazon Connect instance
create_routing_profile	Creates a new routing profile
create_rule	Creates a rule for the specified Amazon Connect instance
create_security_profile	Creates a security profile
create_task_template	Creates a new task template in the specified Amazon Connect instance
create_traffic_distribution_group	Creates a traffic distribution group given an Amazon Connect instance that
create_use_case	Creates a use case for an integration association
create_user	Creates a user account for the specified Amazon Connect instance
create_user_hierarchy_group	Creates a new user hierarchy group
create_view	Creates a new view with the possible status of SAVED or PUBLISHED
create_view_version	Publishes a new version of the view identifier
create_vocabulary	Creates a custom vocabulary associated with your Amazon Connect instance
deactivate_evaluation_form	Deactivates an evaluation form in the specified Amazon Connect instance
delete_attached_file	Deletes an attached file along with the underlying S3 Object
delete_contact_evaluation	Deletes a contact evaluation in the specified Amazon Connect instance
delete_contact_flow	Deletes a flow for the specified Amazon Connect instance
delete_contact_flow_module	Deletes the specified flow module
delete_evaluation_form	Deletes an evaluation form in the specified Amazon Connect instance
delete_hours_of_operation	This API is in preview release for Amazon Connect and is subject to change
delete_instance	This API is in preview release for Amazon Connect and is subject to change
delete_integration_association	Deletes an Amazon Web Services resource association from an Amazon Connect
delete_predefined_attribute	Deletes a predefined attribute from the specified Amazon Connect instance
delete_prompt	Deletes a prompt
delete_queue	Deletes a queue
delete_quick_connect	Deletes a quick connect
delete_routing_profile	Deletes a routing profile
delete_rule	Deletes a rule for the specified Amazon Connect instance

<a href="#">delete_security_profile</a>	Deletes a security profile
<a href="#">delete_task_template</a>	Deletes the task template
<a href="#">delete_traffic_distribution_group</a>	Deletes a traffic distribution group
<a href="#">delete_use_case</a>	Deletes a use case from an integration association
<a href="#">delete_user</a>	Deletes a user account from the specified Amazon Connect instance
<a href="#">delete_user_hierarchy_group</a>	Deletes an existing user hierarchy group
<a href="#">delete_view</a>	Deletes the view entirely
<a href="#">delete_view_version</a>	Deletes the particular version specified in ViewVersion identifier
<a href="#">delete_vocabulary</a>	Deletes the vocabulary that has the given identifier
<a href="#">describe_agent_status</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">describe_authentication_profile</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">describe_contact</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">describe_contact_evaluation</a>	Describes a contact evaluation in the specified Amazon Connect instance
<a href="#">describe_contact_flow</a>	Describes the specified flow
<a href="#">describe_contact_flow_module</a>	Describes the specified flow module
<a href="#">describe_evaluation_form</a>	Describes an evaluation form in the specified Amazon Connect instance
<a href="#">describe_hours_of_operation</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">describe_instance</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">describe_instance_attribute</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">describe_instance_storage_config</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">describe_phone_number</a>	Gets details and status of a phone number that's claimed to your Amazon Connect instance
<a href="#">describe_predefined_attribute</a>	Describes a predefined attribute for the specified Amazon Connect instance
<a href="#">describe_prompt</a>	Describes the prompt
<a href="#">describe_queue</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">describe_quick_connect</a>	Describes the quick connect
<a href="#">describe_routing_profile</a>	Describes the specified routing profile
<a href="#">describe_rule</a>	Describes a rule for the specified Amazon Connect instance
<a href="#">describe_security_profile</a>	Gets basic information about the security profile
<a href="#">describe_traffic_distribution_group</a>	Gets details and status of a traffic distribution group
<a href="#">describe_user</a>	Describes the specified user
<a href="#">describe_user_hierarchy_group</a>	Describes the specified hierarchy group
<a href="#">describe_user_hierarchy_structure</a>	Describes the hierarchy structure of the specified Amazon Connect instance
<a href="#">describe_view</a>	Retrieves the view for the specified Amazon Connect instance and view id
<a href="#">describe_vocabulary</a>	Describes the specified vocabulary
<a href="#">disassociate_analytics_data_set</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">disassociate_approved_origin</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">disassociate_bot</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">disassociate_flow</a>	Disassociates a connect resource from a flow
<a href="#">disassociate_instance_storage_config</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">disassociate_lambda_function</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">disassociate_lex_bot</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">disassociate_phone_number_contact_flow</a>	Removes the flow association from a phone number claimed to your Amazon Connect instance
<a href="#">disassociate_queue_quick_connects</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">disassociate_routing_profile_queues</a>	Disassociates a set of queues from a routing profile
<a href="#">disassociate_security_key</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">disassociate_traffic_distribution_group_user</a>	Disassociates an agent from a traffic distribution group
<a href="#">disassociate_user_proficiencies</a>	Disassociates a set of proficiencies from a user
<a href="#">dismiss_user_contact</a>	Dismisses contacts from an agent's CCP and returns the agent to an available state

<a href="#">get_attached_file</a>	Provides a pre-signed URL for download of an approved attached file
<a href="#">get_contact_attributes</a>	Retrieves the contact attributes for the specified contact
<a href="#">get_current_metric_data</a>	Gets the real-time metric data from the specified Amazon Connect instance
<a href="#">get_current_user_data</a>	Gets the real-time active user data from the specified Amazon Connect instance
<a href="#">get_federation_token</a>	Supports SAML sign-in for Amazon Connect
<a href="#">get_flow_association</a>	Retrieves the flow associated for a given resource
<a href="#">get_metric_data</a>	Gets historical metric data from the specified Amazon Connect instance
<a href="#">get_metric_data_v2</a>	Gets metric data from the specified Amazon Connect instance
<a href="#">get_prompt_file</a>	Gets the prompt file
<a href="#">get_task_template</a>	Gets details about a specific task template in the specified Amazon Connect instance
<a href="#">get_traffic_distribution</a>	Retrieves the current traffic distribution for a given traffic distribution group
<a href="#">import_phone_number</a>	Imports a claimed phone number from an external service, such as Amazon Sumerai
<a href="#">list_agent_statuses</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_analytics_data_associations</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_approved_origins</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_authentication_profiles</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_bots</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_contact_evaluations</a>	Lists contact evaluations in the specified Amazon Connect instance
<a href="#">list_contact_flow_modules</a>	Provides information about the flow modules for the specified Amazon Connect instance
<a href="#">list_contact_flows</a>	Provides information about the flows for the specified Amazon Connect instance
<a href="#">list_contact_references</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_default_vocabularies</a>	Lists the default vocabularies for the specified Amazon Connect instance
<a href="#">list_evaluation_forms</a>	Lists evaluation forms in the specified Amazon Connect instance
<a href="#">list_evaluation_form_versions</a>	Lists versions of an evaluation form in the specified Amazon Connect instance
<a href="#">list_flow_associations</a>	List the flow association based on the filters
<a href="#">list_hours_of_operations</a>	Provides information about the hours of operation for the specified Amazon Connect instance
<a href="#">list_instance_attributes</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_instances</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_instance_storage_configs</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_integration_associations</a>	Provides summary information about the Amazon Web Services resource associated with the specified Amazon Connect instance
<a href="#">list_lambda_functions</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_lex_bots</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_phone_numbers</a>	Provides information about the phone numbers for the specified Amazon Connect instance
<a href="#">list_phone_numbers_v2</a>	Lists phone numbers claimed to your Amazon Connect instance or traffic distribution group
<a href="#">list_predefined_attributes</a>	Lists predefined attributes for the specified Amazon Connect instance
<a href="#">list_prompts</a>	Provides information about the prompts for the specified Amazon Connect instance
<a href="#">list_queue_quick_connects</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_queues</a>	Provides information about the queues for the specified Amazon Connect instance
<a href="#">list_quick_connects</a>	Provides information about the quick connects for the specified Amazon Connect instance
<a href="#">list_realtime_contact_analysis_segments_v2</a>	Provides a list of analysis segments for a real-time analysis session
<a href="#">list_routing_profile_queues</a>	Lists the queues associated with a routing profile
<a href="#">list_routing_profiles</a>	Provides summary information about the routing profiles for the specified Amazon Connect instance
<a href="#">list_rules</a>	List all rules for the specified Amazon Connect instance
<a href="#">list_security_keys</a>	This API is in preview release for Amazon Connect and is subject to change without notice.
<a href="#">list_security_profile_applications</a>	Returns a list of third-party applications in a specific security profile
<a href="#">list_security_profile_permissions</a>	Lists the permissions granted to a security profile
<a href="#">list_security_profiles</a>	Provides summary information about the security profiles for the specified Amazon Connect instance
<a href="#">list_tags_for_resource</a>	Lists the tags for the specified resource

<a href="#">list_task_templates</a>	Lists task templates for the specified Amazon Connect instance
<a href="#">list_traffic_distribution_groups</a>	Lists traffic distribution groups
<a href="#">list_traffic_distribution_group_users</a>	Lists traffic distribution group users
<a href="#">list_use_cases</a>	Lists the use cases for the integration association
<a href="#">list_user_hierarchy_groups</a>	Provides summary information about the hierarchy groups for the specified Amazon Connect instance
<a href="#">list_user_proficiencies</a>	Lists proficiencies associated with a user
<a href="#">list_users</a>	Provides summary information about the users for the specified Amazon Connect instance
<a href="#">list_views</a>	Returns views in the given instance
<a href="#">list_view_versions</a>	Returns all the available versions for the specified Amazon Connect instance
<a href="#">monitor_contact</a>	Initiates silent monitoring of a contact
<a href="#">pause_contact</a>	Allows pausing an ongoing task contact
<a href="#">put_user_status</a>	Changes the current status of a user or agent in Amazon Connect
<a href="#">release_phone_number</a>	Releases a phone number previously claimed to an Amazon Connect instance
<a href="#">replicate_instance</a>	Replicates an Amazon Connect instance in the specified Amazon Web Services Region
<a href="#">resume_contact</a>	Allows resuming a task contact in a paused state
<a href="#">resume_contact_recording</a>	When a contact is being recorded, and the recording has been suspended, resumes recording the contact
<a href="#">search_agent_statuses</a>	Searches AgentStatuses in an Amazon Connect instance, with optional filtering
<a href="#">search_available_phone_numbers</a>	Searches for available phone numbers that you can claim to your Amazon Connect instance
<a href="#">search_contact_flow_modules</a>	Searches the flow modules in an Amazon Connect instance, with optional filtering
<a href="#">search_contact_flows</a>	Searches the contact flows in an Amazon Connect instance, with optional filtering
<a href="#">search_contacts</a>	Searches contacts in an Amazon Connect instance
<a href="#">search_hours_of_operations</a>	Searches the hours of operation in an Amazon Connect instance, with optional filtering
<a href="#">search_predefined_attributes</a>	Searches predefined attributes that meet certain criteria
<a href="#">search_prompts</a>	Searches prompts in an Amazon Connect instance, with optional filtering
<a href="#">search_queues</a>	Searches queues in an Amazon Connect instance, with optional filtering
<a href="#">search_quick_connects</a>	Searches quick connects in an Amazon Connect instance, with optional filtering
<a href="#">search_resource_tags</a>	Searches tags used in an Amazon Connect instance using optional search criteria
<a href="#">search_routing_profiles</a>	Searches routing profiles in an Amazon Connect instance, with optional filtering
<a href="#">search_security_profiles</a>	Searches security profiles in an Amazon Connect instance, with optional filtering
<a href="#">search_user_hierarchy_groups</a>	Searches UserHierarchyGroups in an Amazon Connect instance, with optional filtering
<a href="#">search_users</a>	Searches users in an Amazon Connect instance, with optional filtering
<a href="#">search_vocabularies</a>	Searches for vocabularies within a specific Amazon Connect instance using optional filtering
<a href="#">send_chat_integration_event</a>	Processes chat integration events from Amazon Web Services or external integrations
<a href="#">start_attached_file_upload</a>	Provides a pre-signed Amazon S3 URL in response for uploading your content
<a href="#">start_chat_contact</a>	Initiates a flow to start a new chat for the customer
<a href="#">start_contact_evaluation</a>	Starts an empty evaluation in the specified Amazon Connect instance, using optional filtering
<a href="#">start_contact_recording</a>	Starts recording the contact:
<a href="#">start_contact_streaming</a>	Initiates real-time message streaming for a new chat contact
<a href="#">start_outbound_voice_contact</a>	Places an outbound call to a contact, and then initiates the flow
<a href="#">start_task_contact</a>	Initiates a flow to start a new task contact
<a href="#">start_web_rtc_contact</a>	Places an inbound in-app, web, or video call to a contact, and then initiates the flow
<a href="#">stop_contact</a>	Ends the specified contact
<a href="#">stop_contact_recording</a>	Stops recording a call when a contact is being recorded
<a href="#">stop_contact_streaming</a>	Ends message streaming on a specified contact
<a href="#">submit_contact_evaluation</a>	Submits a contact evaluation in the specified Amazon Connect instance
<a href="#">suspend_contact_recording</a>	When a contact is being recorded, this API suspends recording whatever is being recorded
<a href="#">tag_contact</a>	Adds the specified tags to the contact resource
<a href="#">tag_resource</a>	Adds the specified tags to the specified resource

<a href="#">transfer_contact</a>	Transfers contacts from one agent or queue to another agent or queue at an
<a href="#">untag_contact</a>	Removes the specified tags from the contact resource
<a href="#">untag_resource</a>	Removes the specified tags from the specified resource
<a href="#">update_agent_status</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">update_authentication_profile</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">update_contact</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">update_contact_attributes</a>	Creates or updates user-defined contact attributes associated with the speci
<a href="#">update_contact_evaluation</a>	Updates details about a contact evaluation in the specified Amazon Connect
<a href="#">update_contact_flow_content</a>	Updates the specified flow
<a href="#">update_contact_flow_metadata</a>	Updates metadata about specified flow
<a href="#">update_contact_flow_module_content</a>	Updates specified flow module for the specified Amazon Connect instance
<a href="#">update_contact_flow_module_metadata</a>	Updates metadata about specified flow module
<a href="#">update_contact_flow_name</a>	The name of the flow
<a href="#">update_contact_routing_data</a>	Updates routing priority and age on the contact (QueuePriority and Queue
<a href="#">update_contact_schedule</a>	Updates the scheduled time of a task contact that is already scheduled
<a href="#">update_evaluation_form</a>	Updates details about a specific evaluation form version in the specified A
<a href="#">update_hours_of_operation</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">update_instance_attribute</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">update_instance_storage_config</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">update_participant_role_config</a>	Updates timeouts for when human chat participants are to be considered id
<a href="#">update_phone_number</a>	Updates your claimed phone number from its current Amazon Connect ins
<a href="#">update_phone_number_metadata</a>	Updates a phone number's metadata
<a href="#">update_predefined_attribute</a>	Updates a predefined attribute for the specified Amazon Connect instance
<a href="#">update_prompt</a>	Updates a prompt
<a href="#">update_queue_hours_of_operation</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">update_queue_max_contacts</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">update_queue_name</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">update_queue_outbound_caller_config</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">update_queue_status</a>	This API is in preview release for Amazon Connect and is subject to change
<a href="#">update_quick_connect_config</a>	Updates the configuration settings for the specified quick connect
<a href="#">update_quick_connect_name</a>	Updates the name and description of a quick connect
<a href="#">update_routing_profile_agent_availability_timer</a>	Whether agents with this routing profile will have their routing order calcul
<a href="#">update_routing_profile_concurrency</a>	Updates the channels that agents can handle in the Contact Control Panel (
<a href="#">update_routing_profile_default_outbound_queue</a>	Updates the default outbound queue of a routing profile
<a href="#">update_routing_profile_name</a>	Updates the name and description of a routing profile
<a href="#">update_routing_profile_queues</a>	Updates the properties associated with a set of queues for a routing profile
<a href="#">update_rule</a>	Updates a rule for the specified Amazon Connect instance
<a href="#">update_security_profile</a>	Updates a security profile
<a href="#">update_task_template</a>	Updates details about a specific task template in the specified Amazon Con
<a href="#">update_traffic_distribution</a>	Updates the traffic distribution for a given traffic distribution group
<a href="#">update_user_hierarchy</a>	Assigns the specified hierarchy group to the specified user
<a href="#">update_user_hierarchy_group_name</a>	Updates the name of the user hierarchy group
<a href="#">update_user_hierarchy_structure</a>	Updates the user hierarchy structure: add, remove, and rename user hierar
<a href="#">update_user_identity_info</a>	Updates the identity information for the specified user
<a href="#">update_user_phone_config</a>	Updates the phone configuration settings for the specified user
<a href="#">update_user_proficiencies</a>	Updates the properties associated with the proficiencies of a user
<a href="#">update_user_routing_profile</a>	Assigns the specified routing profile to the specified user
<a href="#">update_user_security_profiles</a>	Assigns the specified security profiles to the specified user

[update\\_view\\_content](#)  
[update\\_view\\_metadata](#)

Updates the view content of the given view identifier in the specified Amazon Connect instance.  
 Updates the view metadata

## Examples

```
## Not run:
svc <- connect()
svc$activate_evaluation_form(
  Foo = 123
)

## End(Not run)
```

---

connectcampaignservice

*AmazonConnectCampaignService*

---

## Description

Provide APIs to create and manage Amazon Connect Campaigns.

## Usage

```
connectcampaignservice(
  config = list(),
  credentials = list(),
  endpoint = NULL,
  region = NULL
)
```

## Arguments

**config** Optional configuration of credentials, endpoint, and/or region.

- **credentials:**
  - **creds:**
    - \* **access\_key\_id:** AWS access key ID
    - \* **secret\_access\_key:** AWS secret access key
    - \* **session\_token:** AWS temporary session token
  - **profile:** The name of a profile to use. If not given, then the default profile is used.
  - **anonymous:** Set anonymous credentials.
- **endpoint:** The complete URL to use for the constructed client.
- **region:** The AWS Region used in instantiating the client.

	<ul style="list-style-type: none"> <li>• <b>close_connection</b>: Immediately close all HTTP connections.</li> <li>• <b>timeout</b>: The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.</li> <li>• <b>s3_force_path_style</b>: Set this to true to force the request to use path-style addressing, i.e. <code>http://s3.amazonaws.com/BUCKET/KEY</code>.</li> <li>• <b>sts_regional_endpoint</b>: Set sts regional endpoint resolver to regional or legacy <a href="https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html">https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html</a></li> </ul>
credentials	<p>Optional credentials shorthand for the config parameter</p> <ul style="list-style-type: none"> <li>• <b>creds</b>: <ul style="list-style-type: none"> <li>– <b>access_key_id</b>: AWS access key ID</li> <li>– <b>secret_access_key</b>: AWS secret access key</li> <li>– <b>session_token</b>: AWS temporary session token</li> </ul> </li> <li>• <b>profile</b>: The name of a profile to use. If not given, then the default profile is used.</li> <li>• <b>anonymous</b>: Set anonymous credentials.</li> </ul>
endpoint	Optional shorthand for complete URL to use for the constructed client.
region	Optional shorthand for AWS Region used in instantiating the client.

## Value

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

## Service syntax

```
svc <- connectcampaignservice(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
        secret_access_key = "string",
        session_token = "string"
      ),
      profile = "string",
      anonymous = "logical"
    ),
    endpoint = "string",
    region = "string",
    close_connection = "logical",
    timeout = "numeric",
    s3_force_path_style = "logical",
    sts_regional_endpoint = "string"
  ),
  credentials = list(
```

```

    creds = list(
      access_key_id = "string",
      secret_access_key = "string",
      session_token = "string"
    ),
    profile = "string",
    anonymous = "logical"
  ),
  endpoint = "string",
  region = "string"
)

```

## Operations

<a href="#">create_campaign</a>	Creates a campaign for the specified Amazon Connect account
<a href="#">delete_campaign</a>	Deletes a campaign from the specified Amazon Connect account
<a href="#">delete_connect_instance_config</a>	Deletes a connect instance config from the specified AWS account
<a href="#">delete_instance_onboarding_job</a>	Delete the Connect Campaigns onboarding job for the specified Amazon Connect account
<a href="#">describe_campaign</a>	Describes the specific campaign
<a href="#">get_campaign_state</a>	Get state of a campaign for the specified Amazon Connect account
<a href="#">get_campaign_state_batch</a>	Get state of campaigns for the specified Amazon Connect account
<a href="#">get_connect_instance_config</a>	Get the specific Connect instance config
<a href="#">get_instance_onboarding_job_status</a>	Get the specific instance onboarding job status
<a href="#">list_campaigns</a>	Provides summary information about the campaigns under the specified Amazon Connect account
<a href="#">list_tags_for_resource</a>	List tags for a resource
<a href="#">pause_campaign</a>	Pauses a campaign for the specified Amazon Connect account
<a href="#">put_dial_request_batch</a>	Creates dial requests for the specified campaign Amazon Connect account
<a href="#">resume_campaign</a>	Stops a campaign for the specified Amazon Connect account
<a href="#">start_campaign</a>	Starts a campaign for the specified Amazon Connect account
<a href="#">start_instance_onboarding_job</a>	Onboard the specific Amazon Connect instance to Connect Campaigns
<a href="#">stop_campaign</a>	Stops a campaign for the specified Amazon Connect account
<a href="#">tag_resource</a>	Tag a resource
<a href="#">untag_resource</a>	Untag a resource
<a href="#">update_campaign_dialer_config</a>	Updates the dialer config of a campaign
<a href="#">update_campaign_name</a>	Updates the name of a campaign
<a href="#">update_campaign_outbound_call_config</a>	Updates the outbound call config of a campaign

## Examples

```

## Not run:
svc <- connectcampaignservice()
svc$create_campaign(
  Foo = 123
)

## End(Not run)

```

connectcases

*Amazon Connect Cases***Description**

With Amazon Connect Cases, your agents can track and manage customer issues that require multiple interactions, follow-up tasks, and teams in your contact center. A case represents a customer issue. It records the issue, the steps and interactions taken to resolve the issue, and the outcome. For more information, see [Amazon Connect Cases](#) in the *Amazon Connect Administrator Guide*.

**Usage**

```
connectcases(
  config = list(),
  credentials = list(),
  endpoint = NULL,
  region = NULL
)
```

**Arguments**

config

Optional configuration of credentials, endpoint, and/or region.

- **credentials:**

- **creds:**

- \* **access\_key\_id:** AWS access key ID
- \* **secret\_access\_key:** AWS secret access key
- \* **session\_token:** AWS temporary session token

- **profile:** The name of a profile to use. If not given, then the default profile is used.

- **anonymous:** Set anonymous credentials.

- **endpoint:** The complete URL to use for the constructed client.

- **region:** The AWS Region used in instantiating the client.

- **close\_connection:** Immediately close all HTTP connections.

- **timeout:** The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.

- **s3\_force\_path\_style:** Set this to true to force the request to use path-style addressing, i.e. `http://s3.amazonaws.com/BUCKET/KEY`.

- **sts\_regional\_endpoint:** Set sts regional endpoint resolver to regional or legacy <https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html>

credentials

Optional credentials shorthand for the config parameter

- **creds:**

- **access\_key\_id:** AWS access key ID

- **secret\_access\_key:** AWS secret access key

- **session\_token**: AWS temporary session token
  - **profile**: The name of a profile to use. If not given, then the default profile is used.
  - **anonymous**: Set anonymous credentials.
- endpoint      Optional shorthand for complete URL to use for the constructed client.
- region        Optional shorthand for AWS Region used in instantiating the client.

### Value

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

### Service syntax

```
svc <- connectcases(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
        secret_access_key = "string",
        session_token = "string"
      ),
      profile = "string",
      anonymous = "logical"
    ),
    endpoint = "string",
    region = "string",
    close_connection = "logical",
    timeout = "numeric",
    s3_force_path_style = "logical",
    sts_regional_endpoint = "string"
  ),
  credentials = list(
    creds = list(
      access_key_id = "string",
      secret_access_key = "string",
      session_token = "string"
    ),
    profile = "string",
    anonymous = "logical"
  ),
  endpoint = "string",
  region = "string"
)
```

### Operations

<a href="#">batch_get_field</a>	Returns the description for the list of fields in the request parameters
<a href="#">batch_put_field_options</a>	Creates and updates a set of field options for a single select field in a Cases domain If you provide a value for PerformedBy
<a href="#">create_case</a>	Creates a domain, which is a container for all case data, such as cases, fields, templates and la
<a href="#">create_domain</a>	Creates a domain, which is a container for all case data, such as cases, fields, templates and la
<a href="#">create_field</a>	Creates a field in the Cases domain
<a href="#">create_layout</a>	Creates a layout in the Cases domain
<a href="#">create_related_item</a>	Creates a related item (comments, tasks, and contacts) and associates it with a case
<a href="#">create_template</a>	Creates a template in the Cases domain
<a href="#">delete_domain</a>	Deletes a Cases domain
<a href="#">delete_field</a>	Deletes a field from a cases template
<a href="#">delete_layout</a>	Deletes a layout from a cases template
<a href="#">delete_template</a>	Deletes a cases template
<a href="#">get_case</a>	Returns information about a specific case if it exists
<a href="#">get_case_audit_events</a>	Returns the audit history about a specific case if it exists
<a href="#">get_case_event_configuration</a>	Returns the case event publishing configuration
<a href="#">get_domain</a>	Returns information about a specific domain if it exists
<a href="#">get_layout</a>	Returns the details for the requested layout
<a href="#">get_template</a>	Returns the details for the requested template
<a href="#">list_cases_for_contact</a>	Lists cases for a given contact
<a href="#">list_domains</a>	Lists all cases domains in the Amazon Web Services account
<a href="#">list_field_options</a>	Lists all of the field options for a field identifier in the domain
<a href="#">list_fields</a>	Lists all fields in a Cases domain
<a href="#">list_layouts</a>	Lists all layouts in the given cases domain
<a href="#">list_tags_for_resource</a>	Lists tags for a resource
<a href="#">list_templates</a>	Lists all of the templates in a Cases domain
<a href="#">put_case_event_configuration</a>	Adds case event publishing configuration
<a href="#">search_cases</a>	Searches for cases within their associated Cases domain
<a href="#">search_related_items</a>	Searches for related items that are associated with a case
<a href="#">tag_resource</a>	Adds tags to a resource
<a href="#">untag_resource</a>	Untags a resource
<a href="#">update_case</a>	If you provide a value for PerformedBy
<a href="#">update_field</a>	Updates the properties of an existing field
<a href="#">update_layout</a>	Updates the attributes of an existing layout
<a href="#">update_template</a>	Updates the attributes of an existing template

## Examples

```
## Not run:
svc <- connectcases()
svc$batch_get_field(
  Foo = 123
)

## End(Not run)
```

---

 connectcontactlens      *Amazon Connect Contact Lens*

---

## Description

- [Contact Lens actions](#)
- [Contact Lens data types](#)

Amazon Connect Contact Lens enables you to analyze conversations between customer and agents, by using speech transcription, natural language processing, and intelligent search capabilities. It performs sentiment analysis, detects issues, and enables you to automatically categorize contacts.

Amazon Connect Contact Lens provides both real-time and post-call analytics of customer-agent conversations. For more information, see [Analyze conversations using speech analytics](#) in the *Amazon Connect Administrator Guide*.

## Usage

```
connectcontactlens(
    config = list(),
    credentials = list(),
    endpoint = NULL,
    region = NULL
)
```

## Arguments

`config`      Optional configuration of credentials, endpoint, and/or region.

- **credentials:**

- **creds:**

- \* **access\_key\_id:** AWS access key ID
- \* **secret\_access\_key:** AWS secret access key
- \* **session\_token:** AWS temporary session token

- **profile:** The name of a profile to use. If not given, then the default profile is used.

- **anonymous:** Set anonymous credentials.

- **endpoint:** The complete URL to use for the constructed client.

- **region:** The AWS Region used in instantiating the client.

- **close\_connection:** Immediately close all HTTP connections.

- **timeout:** The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.

- **s3\_force\_path\_style:** Set this to `true` to force the request to use path-style addressing, i.e. `http://s3.amazonaws.com/BUCKET/KEY`.

- **sts\_regional\_endpoint:** Set sts regional endpoint resolver to regional or legacy <https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html>

credentials	Optional credentials shorthand for the config parameter <ul style="list-style-type: none"> <li>• <b>creds:</b> <ul style="list-style-type: none"> <li>– <b>access_key_id:</b> AWS access key ID</li> <li>– <b>secret_access_key:</b> AWS secret access key</li> <li>– <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>• <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>• <b>anonymous:</b> Set anonymous credentials.</li> </ul>
endpoint	Optional shorthand for complete URL to use for the constructed client.
region	Optional shorthand for AWS Region used in instantiating the client.

### Value

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

### Service syntax

```
svc <- connectcontactlens(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
        secret_access_key = "string",
        session_token = "string"
      ),
      profile = "string",
      anonymous = "logical"
    ),
    endpoint = "string",
    region = "string",
    close_connection = "logical",
    timeout = "numeric",
    s3_force_path_style = "logical",
    sts_regional_endpoint = "string"
  ),
  credentials = list(
    creds = list(
      access_key_id = "string",
      secret_access_key = "string",
      session_token = "string"
    ),
    profile = "string",
    anonymous = "logical"
  ),
  endpoint = "string",
```

```
    region = "string"  
  )
```

## Operations

[list\\_realtime\\_contact\\_analysis\\_segments](#) Provides a list of analysis segments for a real-time analysis session

## Examples

```
## Not run:  
svc <- connectcontactlens()  
svc$list_realtime_contact_analysis_segments(  
  Foo = 123  
)  
  
## End(Not run)
```

---

connectparticipant      *Amazon Connect Participant Service*

---

## Description

Amazon Connect is an easy-to-use omnichannel cloud contact center service that enables companies of any size to deliver superior customer service at a lower cost. Amazon Connect communications capabilities make it easy for companies to deliver personalized interactions across communication channels, including chat.

Use the Amazon Connect Participant Service to manage participants (for example, agents, customers, and managers listening in), and to send messages and events within a chat contact. The APIs in the service enable the following: sending chat messages, attachment sharing, managing a participant's connection state and message events, and retrieving chat transcripts.

## Usage

```
connectparticipant(  
  config = list(),  
  credentials = list(),  
  endpoint = NULL,  
  region = NULL  
)
```

## Arguments

config	Optional configuration of credentials, endpoint, and/or region. <ul style="list-style-type: none"> <li>• <b>credentials:</b> <ul style="list-style-type: none"> <li>– <b>creds:</b> <ul style="list-style-type: none"> <li>* <b>access_key_id:</b> AWS access key ID</li> <li>* <b>secret_access_key:</b> AWS secret access key</li> <li>* <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>– <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>– <b>anonymous:</b> Set anonymous credentials.</li> </ul> </li> <li>• <b>endpoint:</b> The complete URL to use for the constructed client.</li> <li>• <b>region:</b> The AWS Region used in instantiating the client.</li> <li>• <b>close_connection:</b> Immediately close all HTTP connections.</li> <li>• <b>timeout:</b> The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.</li> <li>• <b>s3_force_path_style:</b> Set this to true to force the request to use path-style addressing, i.e. <code>http://s3.amazonaws.com/BUCKET/KEY</code>.</li> <li>• <b>sts_regional_endpoint:</b> Set sts regional endpoint resolver to regional or legacy <a href="https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html">https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html</a></li> </ul>
credentials	Optional credentials shorthand for the config parameter <ul style="list-style-type: none"> <li>• <b>creds:</b> <ul style="list-style-type: none"> <li>– <b>access_key_id:</b> AWS access key ID</li> <li>– <b>secret_access_key:</b> AWS secret access key</li> <li>– <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>• <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>• <b>anonymous:</b> Set anonymous credentials.</li> </ul>
endpoint	Optional shorthand for complete URL to use for the constructed client.
region	Optional shorthand for AWS Region used in instantiating the client.

## Value

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

## Service syntax

```
svc <- connectparticipant(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
```

```

        secret_access_key = "string",
        session_token = "string"
    ),
    profile = "string",
    anonymous = "logical"
),
endpoint = "string",
region = "string",
close_connection = "logical",
timeout = "numeric",
s3_force_path_style = "logical",
sts_regional_endpoint = "string"
),
credentials = list(
  creds = list(
    access_key_id = "string",
    secret_access_key = "string",
    session_token = "string"
  ),
  profile = "string",
  anonymous = "logical"
),
endpoint = "string",
region = "string"
)

```

## Operations

<a href="#">complete_attachment_upload</a>	Allows you to confirm that the attachment has been uploaded using the pre-signed URL provided
<a href="#">create_participant_connection</a>	Creates the participant's connection
<a href="#">describe_view</a>	Retrieves the view for the specified view token
<a href="#">disconnect_participant</a>	Disconnects a participant
<a href="#">get_attachment</a>	Provides a pre-signed URL for download of a completed attachment
<a href="#">get_transcript</a>	Retrieves a transcript of the session, including details about any attachments
<a href="#">send_event</a>	The application/vnd
<a href="#">send_message</a>	Sends a message
<a href="#">start_attachment_upload</a>	Provides a pre-signed Amazon S3 URL in response for uploading the file directly to S3

## Examples

```

## Not run:
svc <- connectparticipant()
svc$complete_attachment_upload(
  Foo = 123
)

## End(Not run)

```

---

connectwisdomservice *Amazon Connect Wisdom Service*

---

## Description

Amazon Connect Wisdom delivers agents the information they need to solve customer issues as they're actively speaking with customers. Agents can search across connected repositories from within their agent desktop to find answers quickly. Use Amazon Connect Wisdom to create an assistant and a knowledge base, for example, or manage content by uploading custom files.

## Usage

```
connectwisdomservice(
    config = list(),
    credentials = list(),
    endpoint = NULL,
    region = NULL
)
```

## Arguments

config	<p>Optional configuration of credentials, endpoint, and/or region.</p> <ul style="list-style-type: none"> <li>• <b>credentials:</b> <ul style="list-style-type: none"> <li>– <b>creds:</b> <ul style="list-style-type: none"> <li>* <b>access_key_id:</b> AWS access key ID</li> <li>* <b>secret_access_key:</b> AWS secret access key</li> <li>* <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>– <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>– <b>anonymous:</b> Set anonymous credentials.</li> </ul> </li> <li>• <b>endpoint:</b> The complete URL to use for the constructed client.</li> <li>• <b>region:</b> The AWS Region used in instantiating the client.</li> <li>• <b>close_connection:</b> Immediately close all HTTP connections.</li> <li>• <b>timeout:</b> The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.</li> <li>• <b>s3_force_path_style:</b> Set this to <code>true</code> to force the request to use path-style addressing, i.e. <code>http://s3.amazonaws.com/BUCKET/KEY</code>.</li> <li>• <b>sts_regional_endpoint:</b> Set sts regional endpoint resolver to regional or legacy <a href="https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html">https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html</a></li> </ul>
credentials	<p>Optional credentials shorthand for the config parameter</p> <ul style="list-style-type: none"> <li>• <b>creds:</b></li> </ul>

- **access\_key\_id**: AWS access key ID
  - **secret\_access\_key**: AWS secret access key
  - **session\_token**: AWS temporary session token
  - **profile**: The name of a profile to use. If not given, then the default profile is used.
  - **anonymous**: Set anonymous credentials.
- endpoint           Optional shorthand for complete URL to use for the constructed client.
- region             Optional shorthand for AWS Region used in instantiating the client.

### Value

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

### Service syntax

```
svc <- connectwisdomservice(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
        secret_access_key = "string",
        session_token = "string"
      ),
      profile = "string",
      anonymous = "logical"
    ),
    endpoint = "string",
    region = "string",
    close_connection = "logical",
    timeout = "numeric",
    s3_force_path_style = "logical",
    sts_regional_endpoint = "string"
  ),
  credentials = list(
    creds = list(
      access_key_id = "string",
      secret_access_key = "string",
      session_token = "string"
    ),
    profile = "string",
    anonymous = "logical"
  ),
  endpoint = "string",
  region = "string"
)
```

## Operations

<a href="#">create_assistant</a>	Creates an Amazon Connect Wisdom assistant
<a href="#">create_assistant_association</a>	Creates an association between an Amazon Connect Wisdom assistant and another r
<a href="#">create_content</a>	Creates Wisdom content
<a href="#">create_knowledge_base</a>	Creates a knowledge base
<a href="#">create_quick_response</a>	Creates a Wisdom quick response
<a href="#">create_session</a>	Creates a session
<a href="#">delete_assistant</a>	Deletes an assistant
<a href="#">delete_assistant_association</a>	Deletes an assistant association
<a href="#">delete_content</a>	Deletes the content
<a href="#">delete_import_job</a>	Deletes the quick response import job
<a href="#">delete_knowledge_base</a>	Deletes the knowledge base
<a href="#">delete_quick_response</a>	Deletes a quick response
<a href="#">get_assistant</a>	Retrieves information about an assistant
<a href="#">get_assistant_association</a>	Retrieves information about an assistant association
<a href="#">get_content</a>	Retrieves content, including a pre-signed URL to download the content
<a href="#">get_content_summary</a>	Retrieves summary information about the content
<a href="#">get_import_job</a>	Retrieves the started import job
<a href="#">get_knowledge_base</a>	Retrieves information about the knowledge base
<a href="#">get_quick_response</a>	Retrieves the quick response
<a href="#">get_recommendations</a>	Retrieves recommendations for the specified session
<a href="#">get_session</a>	Retrieves information for a specified session
<a href="#">list_assistant_associations</a>	Lists information about assistant associations
<a href="#">list_assistants</a>	Lists information about assistants
<a href="#">list_contents</a>	Lists the content
<a href="#">list_import_jobs</a>	Lists information about import jobs
<a href="#">list_knowledge_bases</a>	Lists the knowledge bases
<a href="#">list_quick_responses</a>	Lists information about quick response
<a href="#">list_tags_for_resource</a>	Lists the tags for the specified resource
<a href="#">notify_recommendations_received</a>	Removes the specified recommendations from the specified assistant's queue of new
<a href="#">query_assistant</a>	Performs a manual search against the specified assistant
<a href="#">remove_knowledge_base_template_uri</a>	Removes a URI template from a knowledge base
<a href="#">search_content</a>	Searches for content in a specified knowledge base
<a href="#">search_quick_responses</a>	Searches existing Wisdom quick responses in a Wisdom knowledge base
<a href="#">search_sessions</a>	Searches for sessions
<a href="#">start_content_upload</a>	Get a URL to upload content to a knowledge base
<a href="#">start_import_job</a>	Start an asynchronous job to import Wisdom resources from an uploaded source file
<a href="#">tag_resource</a>	Adds the specified tags to the specified resource
<a href="#">untag_resource</a>	Removes the specified tags from the specified resource
<a href="#">update_content</a>	Updates information about the content
<a href="#">update_knowledge_base_template_uri</a>	Updates the template URI of a knowledge base
<a href="#">update_quick_response</a>	Updates an existing Wisdom quick response

## Examples

```
## Not run:
```

```

svc <- connectwisdomservice()
svc$create_assistant(
  Foo = 123
)

## End(Not run)

```

---

customerprofiles

*Amazon Connect Customer Profiles*

---

### Description

Amazon Connect Customer Profiles is a unified customer profile for your contact center that has pre-built connectors powered by AppFlow that make it easy to combine customer information from third party applications, such as Salesforce (CRM), ServiceNow (ITSM), and your enterprise resource planning (ERP), with contact history from your Amazon Connect contact center.

For more information about the Amazon Connect Customer Profiles feature, see [Use Customer Profiles](#) in the *Amazon Connect Administrator's Guide*.

### Usage

```

customerprofiles(
  config = list(),
  credentials = list(),
  endpoint = NULL,
  region = NULL
)

```

### Arguments

- config      Optional configuration of credentials, endpoint, and/or region.
- **credentials:**
    - **creds:**
      - \* **access\_key\_id:** AWS access key ID
      - \* **secret\_access\_key:** AWS secret access key
      - \* **session\_token:** AWS temporary session token
    - **profile:** The name of a profile to use. If not given, then the default profile is used.
    - **anonymous:** Set anonymous credentials.
  - **endpoint:** The complete URL to use for the constructed client.
  - **region:** The AWS Region used in instantiating the client.
  - **close\_connection:** Immediately close all HTTP connections.
  - **timeout:** The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.

	<ul style="list-style-type: none"> <li>• <b>s3_force_path_style</b>: Set this to true to force the request to use path-style addressing, i.e. <code>http://s3.amazonaws.com/BUCKET/KEY</code>.</li> <li>• <b>sts_regional_endpoint</b>: Set sts regional endpoint resolver to regional or legacy <a href="https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html">https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html</a></li> </ul>
credentials	<p>Optional credentials shorthand for the config parameter</p> <ul style="list-style-type: none"> <li>• <b>creds</b>: <ul style="list-style-type: none"> <li>– <b>access_key_id</b>: AWS access key ID</li> <li>– <b>secret_access_key</b>: AWS secret access key</li> <li>– <b>session_token</b>: AWS temporary session token</li> </ul> </li> <li>• <b>profile</b>: The name of a profile to use. If not given, then the default profile is used.</li> <li>• <b>anonymous</b>: Set anonymous credentials.</li> </ul>
endpoint	Optional shorthand for complete URL to use for the constructed client.
region	Optional shorthand for AWS Region used in instantiating the client.

### Value

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

### Service syntax

```
svc <- customerprofiles(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
        secret_access_key = "string",
        session_token = "string"
      ),
      profile = "string",
      anonymous = "logical"
    ),
    endpoint = "string",
    region = "string",
    close_connection = "logical",
    timeout = "numeric",
    s3_force_path_style = "logical",
    sts_regional_endpoint = "string"
  ),
  credentials = list(
    creds = list(
      access_key_id = "string",
      secret_access_key = "string",
      session_token = "string"
    )
  )
)
```

```

    ),
    profile = "string",
    anonymous = "logical"
  ),
  endpoint = "string",
  region = "string"
)

```

## Operations

<a href="#">add_profile_key</a>	Associates a new key value with a specific profile, such as a Contact Record Contact
<a href="#">create_calculated_attribute_definition</a>	Creates a new calculated attribute definition
<a href="#">create_domain</a>	Creates a domain, which is a container for all customer data, such as customer profile
<a href="#">create_event_stream</a>	Creates an event stream, which is a subscription to real-time events, such as when pro
<a href="#">create_integration_workflow</a>	Creates an integration workflow
<a href="#">create_profile</a>	Creates a standard profile
<a href="#">delete_calculated_attribute_definition</a>	Deletes an existing calculated attribute definition
<a href="#">delete_domain</a>	Deletes a specific domain and all of its customer data, such as customer profile attrib
<a href="#">delete_event_stream</a>	Disables and deletes the specified event stream
<a href="#">delete_integration</a>	Removes an integration from a specific domain
<a href="#">delete_profile</a>	Deletes the standard customer profile and all data pertaining to the profile
<a href="#">delete_profile_key</a>	Removes a searchable key from a customer profile
<a href="#">delete_profile_object</a>	Removes an object associated with a profile of a given ProfileObjectType
<a href="#">delete_profile_object_type</a>	Removes a ProfileObjectType from a specific domain as well as removes all the Profi
<a href="#">delete_workflow</a>	Deletes the specified workflow and all its corresponding resources
<a href="#">detect_profile_object_type</a>	The process of detecting profile object type mapping by using given objects
<a href="#">get_auto_merging_preview</a>	Tests the auto-merging settings of your Identity Resolution Job without merging your
<a href="#">get_calculated_attribute_definition</a>	Provides more information on a calculated attribute definition for Customer Profiles
<a href="#">get_calculated_attribute_for_profile</a>	Retrieve a calculated attribute for a customer profile
<a href="#">get_domain</a>	Returns information about a specific domain
<a href="#">get_event_stream</a>	Returns information about the specified event stream in a specific domain
<a href="#">get_identity_resolution_job</a>	Returns information about an Identity Resolution Job in a specific domain
<a href="#">get_integration</a>	Returns an integration for a domain
<a href="#">get_matches</a>	Before calling this API, use CreateDomain or UpdateDomain to enable identity resolu
<a href="#">get_profile_object_type</a>	Returns the object types for a specific domain
<a href="#">get_profile_object_type_template</a>	Returns the template information for a specific object type
<a href="#">get_similar_profiles</a>	Returns a set of profiles that belong to the same matching group using the matchId or
<a href="#">get_workflow</a>	Get details of specified workflow
<a href="#">get_workflow_steps</a>	Get granular list of steps in workflow
<a href="#">list_account_integrations</a>	Lists all of the integrations associated to a specific URI in the AWS account
<a href="#">list_calculated_attribute_definitions</a>	Lists calculated attribute definitions for Customer Profiles
<a href="#">list_calculated_attributes_for_profile</a>	Retrieve a list of calculated attributes for a customer profile
<a href="#">list_domains</a>	Returns a list of all the domains for an AWS account that have been created
<a href="#">list_event_streams</a>	Returns a list of all the event streams in a specific domain
<a href="#">list_identity_resolution_jobs</a>	Lists all of the Identity Resolution Jobs in your domain
<a href="#">list_integrations</a>	Lists all of the integrations in your domain
<a href="#">list_profile_objects</a>	Returns a list of objects associated with a profile of a given ProfileObjectType
<a href="#">list_profile_object_types</a>	Lists all of the templates available within the service

<a href="#">list_profile_object_type_templates</a>	Lists all of the template information for object types
<a href="#">list_rule_based_matches</a>	Returns a set of MatchIds that belong to the given domain
<a href="#">list_tags_for_resource</a>	Displays the tags associated with an Amazon Connect Customer Profiles resource
<a href="#">list_workflows</a>	Query to list all workflows
<a href="#">merge_profiles</a>	Runs an AWS Lambda job that does the following:
<a href="#">put_integration</a>	Adds an integration between the service and a third-party service, which includes Amazon Connect
<a href="#">put_profile_object</a>	Adds additional objects to customer profiles of a given ObjectType
<a href="#">put_profile_object_type</a>	Defines a ProfileObjectType
<a href="#">search_profiles</a>	Searches for profiles within a specific domain using one or more predefined search keys
<a href="#">tag_resource</a>	Assigns one or more tags (key-value pairs) to the specified Amazon Connect Customer Profiles resource
<a href="#">untag_resource</a>	Removes one or more tags from the specified Amazon Connect Customer Profiles resource
<a href="#">update_calculated_attribute_definition</a>	Updates an existing calculated attribute definition
<a href="#">update_domain</a>	Updates the properties of a domain, including creating or selecting a dead letter queue
<a href="#">update_profile</a>	Updates the properties of a profile

## Examples

```
## Not run:
svc <- customerprofiles()
svc$add_profile_key(
  Foo = 123
)

## End(Not run)
```

---

pinpoint

*Amazon Pinpoint*

---

## Description

Doc Engage API - Amazon Pinpoint API

## Usage

```
pinpoint(config = list(), credentials = list(), endpoint = NULL, region = NULL)
```

## Arguments

`config` Optional configuration of credentials, endpoint, and/or region.

- **credentials:**

- **creds:**

- \* **access\_key\_id:** AWS access key ID
- \* **secret\_access\_key:** AWS secret access key
- \* **session\_token:** AWS temporary session token

	<ul style="list-style-type: none"> <li>– <b>profile</b>: The name of a profile to use. If not given, then the default profile is used.</li> <li>– <b>anonymous</b>: Set anonymous credentials.</li> <li>• <b>endpoint</b>: The complete URL to use for the constructed client.</li> <li>• <b>region</b>: The AWS Region used in instantiating the client.</li> <li>• <b>close_connection</b>: Immediately close all HTTP connections.</li> <li>• <b>timeout</b>: The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.</li> <li>• <b>s3_force_path_style</b>: Set this to <code>true</code> to force the request to use path-style addressing, i.e. <code>http://s3.amazonaws.com/BUCKET/KEY</code>.</li> <li>• <b>sts_regional_endpoint</b>: Set sts regional endpoint resolver to regional or legacy <a href="https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html">https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html</a></li> </ul>
credentials	Optional credentials shorthand for the config parameter <ul style="list-style-type: none"> <li>• <b>creds</b>: <ul style="list-style-type: none"> <li>– <b>access_key_id</b>: AWS access key ID</li> <li>– <b>secret_access_key</b>: AWS secret access key</li> <li>– <b>session_token</b>: AWS temporary session token</li> </ul> </li> <li>• <b>profile</b>: The name of a profile to use. If not given, then the default profile is used.</li> <li>• <b>anonymous</b>: Set anonymous credentials.</li> </ul>
endpoint	Optional shorthand for complete URL to use for the constructed client.
region	Optional shorthand for AWS Region used in instantiating the client.

## Value

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

## Service syntax

```
svc <- pinpoint(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
        secret_access_key = "string",
        session_token = "string"
      ),
      profile = "string",
      anonymous = "logical"
    ),
    endpoint = "string",
    region = "string",
    close_connection = "logical",
```

```

        timeout = "numeric",
        s3_force_path_style = "logical",
        sts_regional_endpoint = "string"
    ),
    credentials = list(
        creds = list(
            access_key_id = "string",
            secret_access_key = "string",
            session_token = "string"
        ),
        profile = "string",
        anonymous = "logical"
    ),
    endpoint = "string",
    region = "string"
)

```

## Operations

<a href="#">create_app</a>	Creates an application
<a href="#">create_campaign</a>	Creates a new campaign for an application or updates the settings of an existing campaign
<a href="#">create_email_template</a>	Creates a message template for messages that are sent through the email channel
<a href="#">create_export_job</a>	Creates an export job for an application
<a href="#">create_import_job</a>	Creates an import job for an application
<a href="#">create_in_app_template</a>	Creates a new message template for messages using the in-app message channel
<a href="#">create_journey</a>	Creates a journey for an application
<a href="#">create_push_template</a>	Creates a message template for messages that are sent through a push notification channel
<a href="#">create_recommender_configuration</a>	Creates an Amazon Pinpoint configuration for a recommender model
<a href="#">create_segment</a>	Creates a new segment for an application or updates the configuration, dimensions, and filters of an existing segment
<a href="#">create_sms_template</a>	Creates a message template for messages that are sent through the SMS channel
<a href="#">create_voice_template</a>	Creates a message template for messages that are sent through the voice channel
<a href="#">delete_adm_channel</a>	Disables the ADM channel for an application and deletes any existing settings
<a href="#">delete_apns_channel</a>	Disables the APNs channel for an application and deletes any existing settings
<a href="#">delete_apns_sandbox_channel</a>	Disables the APNs sandbox channel for an application and deletes any existing settings
<a href="#">delete_apns_voip_channel</a>	Disables the APNs VoIP channel for an application and deletes any existing settings
<a href="#">delete_apns_voip_sandbox_channel</a>	Disables the APNs VoIP sandbox channel for an application and deletes any existing settings
<a href="#">delete_app</a>	Deletes an application
<a href="#">delete_baidu_channel</a>	Disables the Baidu channel for an application and deletes any existing settings
<a href="#">delete_campaign</a>	Deletes a campaign from an application
<a href="#">delete_email_channel</a>	Disables the email channel for an application and deletes any existing settings
<a href="#">delete_email_template</a>	Deletes a message template for messages that were sent through the email channel
<a href="#">delete_endpoint</a>	Deletes an endpoint from an application
<a href="#">delete_event_stream</a>	Deletes the event stream for an application
<a href="#">delete_gcm_channel</a>	Disables the GCM channel for an application and deletes any existing settings
<a href="#">delete_in_app_template</a>	Deletes a message template for messages sent using the in-app message channel
<a href="#">delete_journey</a>	Deletes a journey from an application
<a href="#">delete_push_template</a>	Deletes a message template for messages that were sent through a push notification channel
<a href="#">delete_recommender_configuration</a>	Deletes an Amazon Pinpoint configuration for a recommender model

<code>delete_segment</code>	Deletes a segment from an application
<code>delete_sms_channel</code>	Disables the SMS channel for an application and deletes any existing settings for the channel
<code>delete_sms_template</code>	Deletes a message template for messages that were sent through the SMS channel
<code>delete_user_endpoints</code>	Deletes all the endpoints that are associated with a specific user ID
<code>delete_voice_channel</code>	Disables the voice channel for an application and deletes any existing settings for the channel
<code>delete_voice_template</code>	Deletes a message template for messages that were sent through the voice channel
<code>get_adm_channel</code>	Retrieves information about the status and settings of the ADM channel for an application
<code>get_apns_channel</code>	Retrieves information about the status and settings of the APNs channel for an application
<code>get_apns_sandbox_channel</code>	Retrieves information about the status and settings of the APNs sandbox channel for an application
<code>get_apns_woip_channel</code>	Retrieves information about the status and settings of the APNs VoIP channel for an application
<code>get_apns_woip_sandbox_channel</code>	Retrieves information about the status and settings of the APNs VoIP sandbox channel for an application
<code>get_app</code>	Retrieves information about an application
<code>get_application_date_range_kpi</code>	Retrieves (queries) pre-aggregated data for a standard metric that applies to an application
<code>get_application_settings</code>	Retrieves information about the settings for an application
<code>get_apps</code>	Retrieves information about all the applications that are associated with your account
<code>get_baidu_channel</code>	Retrieves information about the status and settings of the Baidu channel for an application
<code>get_campaign</code>	Retrieves information about the status, configuration, and other settings for a campaign
<code>get_campaign_activities</code>	Retrieves information about all the activities for a campaign
<code>get_campaign_date_range_kpi</code>	Retrieves (queries) pre-aggregated data for a standard metric that applies to a campaign
<code>get_campaigns</code>	Retrieves information about the status, configuration, and other settings for all campaigns
<code>get_campaign_version</code>	Retrieves information about the status, configuration, and other settings for a specific campaign version
<code>get_campaign_versions</code>	Retrieves information about the status, configuration, and other settings for all campaign versions
<code>get_channels</code>	Retrieves information about the history and status of each channel for an application
<code>get_email_channel</code>	Retrieves information about the status and settings of the email channel for an application
<code>get_email_template</code>	Retrieves the content and settings of a message template for messages that are sent through the email channel
<code>get_endpoint</code>	Retrieves information about the settings and attributes of a specific endpoint for an application
<code>get_event_stream</code>	Retrieves information about the event stream settings for an application
<code>get_export_job</code>	Retrieves information about the status and settings of a specific export job for an application
<code>get_export_jobs</code>	Retrieves information about the status and settings of all the export jobs for an application
<code>get_gcm_channel</code>	Retrieves information about the status and settings of the GCM channel for an application
<code>get_import_job</code>	Retrieves information about the status and settings of a specific import job for an application
<code>get_import_jobs</code>	Retrieves information about the status and settings of all the import jobs for an application
<code>get_in_app_messages</code>	Retrieves the in-app messages targeted for the provided endpoint ID
<code>get_in_app_template</code>	Retrieves the content and settings of a message template for messages sent through the in-app channel
<code>get_journey</code>	Retrieves information about the status, configuration, and other settings for a journey
<code>get_journey_date_range_kpi</code>	Retrieves (queries) pre-aggregated data for a standard engagement metric that applies to a journey
<code>get_journey_execution_activity_metrics</code>	Retrieves (queries) pre-aggregated data for a standard execution metric that applies to a journey
<code>get_journey_execution_metrics</code>	Retrieves (queries) pre-aggregated data for a standard execution metric that applies to a journey
<code>get_journey_run_execution_activity_metrics</code>	Retrieves (queries) pre-aggregated data for a standard run execution metric that applies to a journey
<code>get_journey_run_execution_metrics</code>	Retrieves (queries) pre-aggregated data for a standard run execution metric that applies to a journey
<code>get_journey_runs</code>	Provides information about the runs of a journey
<code>get_push_template</code>	Retrieves the content and settings of a message template for messages that are sent through the push channel
<code>get_recommender_configuration</code>	Retrieves information about an Amazon Pinpoint configuration for a recommender model
<code>get_recommender_configurations</code>	Retrieves information about all the recommender model configurations that are associated with your account
<code>get_segment</code>	Retrieves information about the configuration, dimension, and other settings for a segment
<code>get_segment_export_jobs</code>	Retrieves information about the status and settings of the export jobs for a segment
<code>get_segment_import_jobs</code>	Retrieves information about the status and settings of the import jobs for a segment
<code>get_segments</code>	Retrieves information about the configuration, dimension, and other settings for all segments

<a href="#">get_segment_version</a>	Retrieves information about the configuration, dimension, and other settings for a segment
<a href="#">get_segment_versions</a>	Retrieves information about the configuration, dimension, and other settings for all segments
<a href="#">get_sms_channel</a>	Retrieves information about the status and settings of the SMS channel for an application
<a href="#">get_sms_template</a>	Retrieves the content and settings of a message template for messages that are sent through the SMS channel
<a href="#">get_user_endpoints</a>	Retrieves information about all the endpoints that are associated with a specific user
<a href="#">get_voice_channel</a>	Retrieves information about the status and settings of the voice channel for an application
<a href="#">get_voice_template</a>	Retrieves the content and settings of a message template for messages that are sent through the voice channel
<a href="#">list_journeys</a>	Retrieves information about the status, configuration, and other settings for all journeys
<a href="#">list_tags_for_resource</a>	Retrieves all the tags (keys and values) that are associated with an application, campaign, message, or journey
<a href="#">list_templates</a>	Retrieves information about all the message templates that are associated with an application
<a href="#">list_template_versions</a>	Retrieves information about all the versions of a specific message template
<a href="#">phone_number_validate</a>	Retrieves information about a phone number
<a href="#">put_events</a>	Creates a new event to record for endpoints, or creates or updates endpoint data
<a href="#">put_event_stream</a>	Creates a new event stream for an application or updates the settings of an existing event stream
<a href="#">remove_attributes</a>	Removes one or more custom attributes, of the same attribute type, from the application
<a href="#">send_messages</a>	Creates and sends a direct message
<a href="#">send_otp_message</a>	Send an OTP message
<a href="#">send_users_messages</a>	Creates and sends a message to a list of users
<a href="#">tag_resource</a>	Adds one or more tags (keys and values) to an application, campaign, message, or journey
<a href="#">untag_resource</a>	Removes one or more tags (keys and values) from an application, campaign, message, or journey
<a href="#">update_adm_channel</a>	Enables the ADM channel for an application or updates the status and settings of the ADM channel
<a href="#">update_apns_channel</a>	Enables the APNs channel for an application or updates the status and settings of the APNs channel
<a href="#">update_apns_sandbox_channel</a>	Enables the APNs sandbox channel for an application or updates the status and settings of the APNs sandbox channel
<a href="#">update_apns_voip_channel</a>	Enables the APNs VoIP channel for an application or updates the status and settings of the APNs VoIP channel
<a href="#">update_apns_voip_sandbox_channel</a>	Enables the APNs VoIP sandbox channel for an application or updates the status and settings of the APNs VoIP sandbox channel
<a href="#">update_application_settings</a>	Updates the settings for an application
<a href="#">update_baidu_channel</a>	Enables the Baidu channel for an application or updates the status and settings of the Baidu channel
<a href="#">update_campaign</a>	Updates the configuration and other settings for a campaign
<a href="#">update_email_channel</a>	Enables the email channel for an application or updates the status and settings of the email channel
<a href="#">update_email_template</a>	Updates an existing message template for messages that are sent through the email channel
<a href="#">update_endpoint</a>	Creates a new endpoint for an application or updates the settings and attributes of an existing endpoint
<a href="#">update_endpoints_batch</a>	Creates a new batch of endpoints for an application or updates the settings and attributes of an existing batch
<a href="#">update_gcm_channel</a>	Enables the GCM channel for an application or updates the status and settings of the GCM channel
<a href="#">update_in_app_template</a>	Updates an existing message template for messages sent through the in-app message channel
<a href="#">update_journey</a>	Updates the configuration and other settings for a journey
<a href="#">update_journey_state</a>	Cancels (stops) an active journey
<a href="#">update_push_template</a>	Updates an existing message template for messages that are sent through a push notification
<a href="#">update_recommender_configuration</a>	Updates an Amazon Pinpoint configuration for a recommender model
<a href="#">update_segment</a>	Creates a new segment for an application or updates the configuration, dimension, and other settings for a segment
<a href="#">update_sms_channel</a>	Enables the SMS channel for an application or updates the status and settings of the SMS channel
<a href="#">update_sms_template</a>	Updates an existing message template for messages that are sent through the SMS channel
<a href="#">update_template_active_version</a>	Changes the status of a specific version of a message template to active
<a href="#">update_voice_channel</a>	Enables the voice channel for an application or updates the status and settings of the voice channel
<a href="#">update_voice_template</a>	Updates an existing message template for messages that are sent through the voice channel
<a href="#">verify_otp_message</a>	Verify an OTP

## Examples

```
## Not run:
svc <- pinpoint()
# The following example gets activity execution metrics for a single run
# of a journey.
svc$get_journey_run_execution_activity_metrics(
  ApplicationId = "11111111112222222222333333333344",
  JourneyId = "aaaaaaaaabbbbbbbbbcdddd",
  RunId = "99999999988888888877777777766",
  JourneyActivityId = "AAAAAAAAA"
)

## End(Not run)
```

pinpointemail

*Amazon Pinpoint Email Service*

---

## Description

Welcome to the *Amazon Pinpoint Email API Reference*. This guide provides information about the Amazon Pinpoint Email API (version 1.0), including supported operations, data types, parameters, and schemas.

**Amazon Pinpoint** is an AWS service that you can use to engage with your customers across multiple messaging channels. You can use Amazon Pinpoint to send email, SMS text messages, voice messages, and push notifications. The Amazon Pinpoint Email API provides programmatic access to options that are unique to the email channel and supplement the options provided by the Amazon Pinpoint API.

If you're new to Amazon Pinpoint, you might find it helpful to also review the **Amazon Pinpoint Developer Guide**. The *Amazon Pinpoint Developer Guide* provides tutorials, code samples, and procedures that demonstrate how to use Amazon Pinpoint features programmatically and how to integrate Amazon Pinpoint functionality into mobile apps and other types of applications. The guide also provides information about key topics such as Amazon Pinpoint integration with other AWS services and the limits that apply to using the service.

The Amazon Pinpoint Email API is available in several AWS Regions and it provides an endpoint for each of these Regions. For a list of all the Regions and endpoints where the API is currently available, see **AWS Service Endpoints** in the *Amazon Web Services General Reference*. To learn more about AWS Regions, see **Managing AWS Regions** in the *Amazon Web Services General Reference*.

In each Region, AWS maintains multiple Availability Zones. These Availability Zones are physically isolated from each other, but are united by private, low-latency, high-throughput, and highly redundant network connections. These Availability Zones enable us to provide very high levels of availability and redundancy, while also minimizing latency. To learn more about the number of Availability Zones that are available in each Region, see **AWS Global Infrastructure**.

**Usage**

```
pinpointemail(
    config = list(),
    credentials = list(),
    endpoint = NULL,
    region = NULL
)
```

**Arguments**

config	Optional configuration of credentials, endpoint, and/or region. <ul style="list-style-type: none"> <li>• <b>credentials:</b> <ul style="list-style-type: none"> <li>– <b>creds:</b> <ul style="list-style-type: none"> <li>* <b>access_key_id:</b> AWS access key ID</li> <li>* <b>secret_access_key:</b> AWS secret access key</li> <li>* <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>– <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>– <b>anonymous:</b> Set anonymous credentials.</li> </ul> </li> <li>• <b>endpoint:</b> The complete URL to use for the constructed client.</li> <li>• <b>region:</b> The AWS Region used in instantiating the client.</li> <li>• <b>close_connection:</b> Immediately close all HTTP connections.</li> <li>• <b>timeout:</b> The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.</li> <li>• <b>s3_force_path_style:</b> Set this to true to force the request to use path-style addressing, i.e. <code>http://s3.amazonaws.com/BUCKET/KEY</code>.</li> <li>• <b>sts_regional_endpoint:</b> Set sts regional endpoint resolver to regional or legacy <a href="https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html">https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html</a></li> </ul>
credentials	Optional credentials shorthand for the config parameter <ul style="list-style-type: none"> <li>• <b>creds:</b> <ul style="list-style-type: none"> <li>– <b>access_key_id:</b> AWS access key ID</li> <li>– <b>secret_access_key:</b> AWS secret access key</li> <li>– <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>• <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>• <b>anonymous:</b> Set anonymous credentials.</li> </ul>
endpoint	Optional shorthand for complete URL to use for the constructed client.
region	Optional shorthand for AWS Region used in instantiating the client.

**Value**

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

**Service syntax**

```

svc <- pinpointemail(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
        secret_access_key = "string",
        session_token = "string"
      ),
      profile = "string",
      anonymous = "logical"
    ),
    endpoint = "string",
    region = "string",
    close_connection = "logical",
    timeout = "numeric",
    s3_force_path_style = "logical",
    sts_regional_endpoint = "string"
  ),
  credentials = list(
    creds = list(
      access_key_id = "string",
      secret_access_key = "string",
      session_token = "string"
    ),
    profile = "string",
    anonymous = "logical"
  ),
  endpoint = "string",
  region = "string"
)

```

**Operations**

<a href="#">create_configuration_set</a>	Create a configuration set
<a href="#">create_configuration_set_event_destination</a>	Create an event destination
<a href="#">create_dedicated_ip_pool</a>	Create a new pool of dedicated IP addresses
<a href="#">create_deliverability_test_report</a>	Create a new predictive inbox placement test
<a href="#">create_email_identity</a>	Verifies an email identity for use with Amazon Pinpoint
<a href="#">delete_configuration_set</a>	Delete an existing configuration set
<a href="#">delete_configuration_set_event_destination</a>	Delete an event destination
<a href="#">delete_dedicated_ip_pool</a>	Delete a dedicated IP pool
<a href="#">delete_email_identity</a>	Deletes an email identity that you previously verified for use with Amazon Pinpoint
<a href="#">get_account</a>	Obtain information about the email-sending status and capabilities of your Amazon Pinpoint account
<a href="#">get_blacklist_reports</a>	Retrieve a list of the blacklists that your dedicated IP addresses appear on
<a href="#">get_configuration_set</a>	Get information about an existing configuration set, including the dedicated IP addresses
<a href="#">get_configuration_set_event_destinations</a>	Retrieve a list of event destinations that are associated with a configuration set

<code>get_dedicated_ip</code>	Get information about a dedicated IP address, including the name of the dedicated IP address.
<code>get_dedicated_ips</code>	List the dedicated IP addresses that are associated with your Amazon Pinpoint account.
<code>get_deliverability_dashboard_options</code>	Retrieve information about the status of the Deliverability dashboard for your Amazon Pinpoint account.
<code>get_deliverability_test_report</code>	Retrieve the results of a predictive inbox placement test.
<code>get_domain_deliverability_campaign</code>	Retrieve all the deliverability data for a specific campaign.
<code>get_domain_statistics_report</code>	Retrieve inbox placement and engagement rates for the domains that you use for your Amazon Pinpoint account.
<code>get_email_identity</code>	Provides information about a specific identity associated with your Amazon Pinpoint account.
<code>list_configuration_sets</code>	List all of the configuration sets associated with your Amazon Pinpoint account.
<code>list_dedicated_ip_pools</code>	List all of the dedicated IP pools that exist in your Amazon Pinpoint account.
<code>list_deliverability_test_reports</code>	Show a list of the predictive inbox placement tests that you've performed, regardless of their status.
<code>list_domain_deliverability_campaigns</code>	Retrieve deliverability data for all the campaigns that used a specific domain.
<code>list_email_identities</code>	Returns a list of all of the email identities that are associated with your Amazon Pinpoint account.
<code>list_tags_for_resource</code>	Retrieve a list of the tags (keys and values) that are associated with a specified resource.
<code>put_account_dedicated_ip_warmup_attributes</code>	Enable or disable the automatic warm-up feature for dedicated IP addresses.
<code>put_account_sending_attributes</code>	Enable or disable the ability of your account to send email.
<code>put_configuration_set_delivery_options</code>	Associate a configuration set with a dedicated IP pool.
<code>put_configuration_set_reputation_options</code>	Enable or disable collection of reputation metrics for emails that you send using a dedicated IP pool.
<code>put_configuration_set_sending_options</code>	Enable or disable email sending for messages that use a particular configuration set.
<code>put_configuration_set_tracking_options</code>	Specify a custom domain to use for open and click tracking elements in email messages.
<code>put_dedicated_ip_in_pool</code>	Move a dedicated IP address to an existing dedicated IP pool.
<code>put_dedicated_ip_warmup_attributes</code>	Put dedicated ip warmup attributes.
<code>put_deliverability_dashboard_option</code>	Enable or disable the Deliverability dashboard for your Amazon Pinpoint account.
<code>put_email_identity_dkim_attributes</code>	Used to enable or disable DKIM authentication for an email identity.
<code>put_email_identity_feedback_attributes</code>	Used to enable or disable feedback forwarding for an identity.
<code>put_email_identity_mail_from_attributes</code>	Used to enable or disable the custom Mail-From domain configuration for an identity.
<code>send_email</code>	Sends an email message.
<code>tag_resource</code>	Add one or more tags (keys and values) to a specified resource.
<code>untag_resource</code>	Remove one or more tags (keys and values) from a specified resource.
<code>update_configuration_set_event_destination</code>	Update the configuration of an event destination for a configuration set.

## Examples

```
## Not run:
svc <- pinpointemail()
svc$create_configuration_set(
  Foo = 123
)

## End(Not run)
```

**Description**

Pinpoint SMS and Voice Messaging public facing APIs

**Usage**

```
pinpointSMSvoice(
    config = list(),
    credentials = list(),
    endpoint = NULL,
    region = NULL
)
```

**Arguments**

config	Optional configuration of credentials, endpoint, and/or region. <ul style="list-style-type: none"> <li>• <b>credentials:</b> <ul style="list-style-type: none"> <li>– <b>creds:</b> <ul style="list-style-type: none"> <li>* <b>access_key_id:</b> AWS access key ID</li> <li>* <b>secret_access_key:</b> AWS secret access key</li> <li>* <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>– <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>– <b>anonymous:</b> Set anonymous credentials.</li> </ul> </li> <li>• <b>endpoint:</b> The complete URL to use for the constructed client.</li> <li>• <b>region:</b> The AWS Region used in instantiating the client.</li> <li>• <b>close_connection:</b> Immediately close all HTTP connections.</li> <li>• <b>timeout:</b> The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.</li> <li>• <b>s3_force_path_style:</b> Set this to true to force the request to use path-style addressing, i.e. <code>http://s3.amazonaws.com/BUCKET/KEY</code>.</li> <li>• <b>sts_regional_endpoint:</b> Set sts regional endpoint resolver to regional or legacy <a href="https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html">https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html</a></li> </ul>
credentials	Optional credentials shorthand for the config parameter <ul style="list-style-type: none"> <li>• <b>creds:</b> <ul style="list-style-type: none"> <li>– <b>access_key_id:</b> AWS access key ID</li> <li>– <b>secret_access_key:</b> AWS secret access key</li> <li>– <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>• <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>• <b>anonymous:</b> Set anonymous credentials.</li> </ul>
endpoint	Optional shorthand for complete URL to use for the constructed client.
region	Optional shorthand for AWS Region used in instantiating the client.

**Value**

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

**Service syntax**

```
svc <- pinpointSMSvoice(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
        secret_access_key = "string",
        session_token = "string"
      ),
      profile = "string",
      anonymous = "logical"
    ),
    endpoint = "string",
    region = "string",
    close_connection = "logical",
    timeout = "numeric",
    s3_force_path_style = "logical",
    sts_regional_endpoint = "string"
  ),
  credentials = list(
    creds = list(
      access_key_id = "string",
      secret_access_key = "string",
      session_token = "string"
    ),
    profile = "string",
    anonymous = "logical"
  ),
  endpoint = "string",
  region = "string"
)
```

**Operations**

<a href="#">create_configuration_set</a>	Create a new configuration set
<a href="#">create_configuration_set_event_destination</a>	Create a new event destination in a configuration set
<a href="#">delete_configuration_set</a>	Deletes an existing configuration set
<a href="#">delete_configuration_set_event_destination</a>	Deletes an event destination in a configuration set
<a href="#">get_configuration_set_event_destinations</a>	Obtain information about an event destination, including the types of events it receives
<a href="#">list_configuration_sets</a>	List all of the configuration sets associated with your Amazon Pinpoint account
<a href="#">send_voice_message</a>	Create a new voice message and send it to a recipient's phone number
<a href="#">update_configuration_set_event_destination</a>	Update an event destination in a configuration set

## Examples

```
## Not run:
svc <- pinpointSMSvoice()
svc$create_configuration_set(
  Foo = 123
)

## End(Not run)
```

---

pinpointSMSvoicev2      *Amazon Pinpoint SMS Voice V2*

---

## Description

Welcome to the *AWS End User Messaging SMS and Voice, version 2 API Reference*. This guide provides information about AWS End User Messaging SMS and Voice, version 2 API resources, including supported HTTP methods, parameters, and schemas.

Amazon Pinpoint is an Amazon Web Services service that you can use to engage with your recipients across multiple messaging channels. The AWS End User Messaging SMS and Voice, version 2 API provides programmatic access to options that are unique to the SMS and voice channels. AWS End User Messaging SMS and Voice, version 2 resources such as phone numbers, sender IDs, and opt-out lists can be used by the Amazon Pinpoint API.

If you're new to AWS End User Messaging SMS and Voice, it's also helpful to review the [AWS End User Messaging SMS User Guide](#). The *AWS End User Messaging SMS User Guide* provides tutorials, code samples, and procedures that demonstrate how to use AWS End User Messaging SMS and Voice features programmatically and how to integrate functionality into mobile apps and other types of applications. The guide also provides key information, such as AWS End User Messaging SMS and Voice integration with other Amazon Web Services services, and the quotas that apply to use of the service.

### Regional availability

The *AWS End User Messaging SMS and Voice version 2 API Reference* is available in several Amazon Web Services Regions and it provides an endpoint for each of these Regions. For a list of all the Regions and endpoints where the API is currently available, see [Amazon Web Services Service Endpoints](#) and [Amazon Pinpoint endpoints and quotas](#) in the Amazon Web Services General Reference. To learn more about Amazon Web Services Regions, see [Managing Amazon Web Services Regions](#) in the Amazon Web Services General Reference.

In each Region, Amazon Web Services maintains multiple Availability Zones. These Availability Zones are physically isolated from each other, but are united by private, low-latency, high-throughput, and highly redundant network connections. These Availability Zones enable us to provide very high levels of availability and redundancy, while also minimizing latency. To learn more about the number of Availability Zones that are available in each Region, see [Amazon Web Services Global Infrastructure](#).

**Usage**

```
pinpointSMSvoicev2(
  config = list(),
  credentials = list(),
  endpoint = NULL,
  region = NULL
)
```

**Arguments**

config	Optional configuration of credentials, endpoint, and/or region. <ul style="list-style-type: none"> <li>• <b>credentials:</b> <ul style="list-style-type: none"> <li>– <b>creds:</b> <ul style="list-style-type: none"> <li>* <b>access_key_id:</b> AWS access key ID</li> <li>* <b>secret_access_key:</b> AWS secret access key</li> <li>* <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>– <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>– <b>anonymous:</b> Set anonymous credentials.</li> </ul> </li> <li>• <b>endpoint:</b> The complete URL to use for the constructed client.</li> <li>• <b>region:</b> The AWS Region used in instantiating the client.</li> <li>• <b>close_connection:</b> Immediately close all HTTP connections.</li> <li>• <b>timeout:</b> The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.</li> <li>• <b>s3_force_path_style:</b> Set this to true to force the request to use path-style addressing, i.e. <code>http://s3.amazonaws.com/BUCKET/KEY</code>.</li> <li>• <b>sts_regional_endpoint:</b> Set sts regional endpoint resolver to regional or legacy <a href="https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html">https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html</a></li> </ul>
credentials	Optional credentials shorthand for the config parameter <ul style="list-style-type: none"> <li>• <b>creds:</b> <ul style="list-style-type: none"> <li>– <b>access_key_id:</b> AWS access key ID</li> <li>– <b>secret_access_key:</b> AWS secret access key</li> <li>– <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>• <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>• <b>anonymous:</b> Set anonymous credentials.</li> </ul>
endpoint	Optional shorthand for complete URL to use for the constructed client.
region	Optional shorthand for AWS Region used in instantiating the client.

**Value**

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

**Service syntax**

```

svc <- pinpointSMSvoicev2(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
        secret_access_key = "string",
        session_token = "string"
      ),
      profile = "string",
      anonymous = "logical"
    ),
    endpoint = "string",
    region = "string",
    close_connection = "logical",
    timeout = "numeric",
    s3_force_path_style = "logical",
    sts_regional_endpoint = "string"
  ),
  credentials = list(
    creds = list(
      access_key_id = "string",
      secret_access_key = "string",
      session_token = "string"
    ),
    profile = "string",
    anonymous = "logical"
  ),
  endpoint = "string",
  region = "string"
)

```

**Operations**

<a href="#">associate_origination_identity</a>	Associates the specified origination identity with a pool
<a href="#">associate_protect_configuration</a>	Associate a protect configuration with a configuration set
<a href="#">create_configuration_set</a>	Creates a new configuration set
<a href="#">create_event_destination</a>	Creates a new event destination in a configuration set
<a href="#">create_opt_out_list</a>	Creates a new opt-out list
<a href="#">create_pool</a>	Creates a new pool and associates the specified origination identity to the pool
<a href="#">create_protect_configuration</a>	Create a new protect configuration
<a href="#">create_registration</a>	Creates a new registration based on the RegistrationType field
<a href="#">create_registration_association</a>	Associate the registration with an origination identity such as a phone number
<a href="#">create_registration_attachment</a>	Create a new registration attachment to use for uploading a file or a URL to a registration
<a href="#">create_registration_version</a>	Create a new version of the registration and increase the VersionNumber
<a href="#">create_verified_destination_number</a>	You can only send messages to verified destination numbers when your account is verified
<a href="#">delete_account_default_protect_configuration</a>	Removes the current account default protect configuration

<code>delete_configuration_set</code>	Deletes an existing configuration set
<code>delete_default_message_type</code>	Deletes an existing default message type on a configuration set
<code>delete_default_sender_id</code>	Deletes an existing default sender ID on a configuration set
<code>delete_event_destination</code>	Deletes an existing event destination
<code>delete_keyword</code>	Deletes an existing keyword from an origination phone number or pool
<code>delete_media_message_spend_limit_override</code>	Deletes an account-level monthly spending limit override for sending multimedia messages
<code>delete_opted_out_number</code>	Deletes an existing opted out destination phone number from the specified opt-out list
<code>delete_opt_out_list</code>	Deletes an existing opt-out list
<code>delete_pool</code>	Deletes an existing pool
<code>delete_protect_configuration</code>	Permanently delete the protect configuration
<code>delete_registration</code>	Permanently delete an existing registration from your account
<code>delete_registration_attachment</code>	Permanently delete the specified registration attachment
<code>delete_registration_field_value</code>	Delete the value in a registration form field
<code>delete_text_message_spend_limit_override</code>	Deletes an account-level monthly spending limit override for sending text messages
<code>delete_verified_destination_number</code>	Delete a verified destination phone number
<code>delete_voice_message_spend_limit_override</code>	Deletes an account level monthly spend limit override for sending voice messages
<code>describe_account_attributes</code>	Describes attributes of your Amazon Web Services account
<code>describe_account_limits</code>	Describes the current AWS End User Messaging SMS and Voice SMS Voice limits
<code>describe_configuration_sets</code>	Describes the specified configuration sets or all in your account
<code>describe_keywords</code>	Describes the specified keywords or all keywords on your origination phone number or pool
<code>describe_opted_out_numbers</code>	Describes the specified opted out destination numbers or all opted out destination numbers
<code>describe_opt_out_lists</code>	Describes the specified opt-out list or all opt-out lists in your account
<code>describe_phone_numbers</code>	Describes the specified origination phone number, or all the phone numbers in your account
<code>describe_pools</code>	Retrieves the specified pools or all pools associated with your Amazon Web Services account
<code>describe_protect_configurations</code>	Retrieves the protect configurations that match any of filters
<code>describe_registration_attachments</code>	Retrieves the specified registration attachments or all registration attachments
<code>describe_registration_field_definitions</code>	Retrieves the specified registration type field definitions
<code>describe_registration_field_values</code>	Retrieves the specified registration field values
<code>describe_registrations</code>	Retrieves the specified registrations
<code>describe_registration_section_definitions</code>	Retrieves the specified registration section definitions
<code>describe_registration_type_definitions</code>	Retrieves the specified registration type definitions
<code>describe_registration_versions</code>	Retrieves the specified registration version
<code>describe_sender_ids</code>	Describes the specified SenderIds or all SenderIds associated with your Amazon Web Services account
<code>describe_spend_limits</code>	Describes the current monthly spend limits for sending voice and text messages
<code>describe_verified_destination_numbers</code>	Retrieves the specified verified destination numbers
<code>disassociate_origination_identity</code>	Removes the specified origination identity from an existing pool
<code>disassociate_protect_configuration</code>	Disassociate a protect configuration from a configuration set
<code>discard_registration_version</code>	Discard the current version of the registration
<code>get_protect_configuration_country_rule_set</code>	Retrieve the CountryRuleSet for the specified NumberCapability from a pool
<code>list_pool_origination_identities</code>	Lists all associated origination identities in your pool
<code>list_registration_associations</code>	Retrieve all of the origination identities that are associated with a registration
<code>list_tags_for_resource</code>	List all tags associated with a resource
<code>put_keyword</code>	Creates or updates a keyword configuration on an origination phone number or pool
<code>put_opted_out_number</code>	Creates an opted out destination phone number in the opt-out list
<code>put_registration_field_value</code>	Creates or updates a field value for a registration
<code>release_phone_number</code>	Releases an existing origination phone number in your account
<code>release_sender_id</code>	Releases an existing sender ID in your account
<code>request_phone_number</code>	Request an origination phone number for use in your account

<a href="#">request_sender_id</a>	Request a new sender ID that doesn't require registration
<a href="#">send_destination_number_verification_code</a>	Before you can send test messages to a verified destination phone number you
<a href="#">send_media_message</a>	Creates a new multimedia message (MMS) and sends it to a recipient's phone
<a href="#">send_text_message</a>	Creates a new text message and sends it to a recipient's phone number
<a href="#">send_voice_message</a>	Allows you to send a request that sends a voice message
<a href="#">set_account_default_protect_configuration</a>	Set a protect configuration as your account default
<a href="#">set_default_message_type</a>	Sets the default message type on a configuration set
<a href="#">set_default_sender_id</a>	Sets default sender ID on a configuration set
<a href="#">set_media_message_spend_limit_override</a>	Sets an account level monthly spend limit override for sending MMS messages
<a href="#">set_text_message_spend_limit_override</a>	Sets an account level monthly spend limit override for sending text messages
<a href="#">set_voice_message_spend_limit_override</a>	Sets an account level monthly spend limit override for sending voice messages
<a href="#">submit_registration_version</a>	Submit the specified registration for review and approval
<a href="#">tag_resource</a>	Adds or overwrites only the specified tags for the specified resource
<a href="#">untag_resource</a>	Removes the association of the specified tags from a resource
<a href="#">update_event_destination</a>	Updates an existing event destination in a configuration set
<a href="#">update_phone_number</a>	Updates the configuration of an existing origination phone number
<a href="#">update_pool</a>	Updates the configuration of an existing pool
<a href="#">update_protect_configuration</a>	Update the setting for an existing protect configuration
<a href="#">update_protect_configuration_country_rule_set</a>	Update a country rule set to ALLOW or BLOCK messages to be sent to the
<a href="#">update_sender_id</a>	Updates the configuration of an existing sender ID
<a href="#">verify_destination_number</a>	Use the verification code that was received by the verified destination phone

## Examples

```
## Not run:
svc <- pinpointSMSvoicev2()
svc$associate_origination_identity(
  Foo = 123
)

## End(Not run)
```

---

ses

*Amazon Simple Email Service*

---

## Description

This document contains reference information for the [Amazon Simple Email Service](#) (Amazon SES) API, version 2010-12-01. This document is best used in conjunction with the [Amazon SES Developer Guide](#).

For a list of Amazon SES endpoints to use in service requests, see [Regions and Amazon SES](#) in the [Amazon SES Developer Guide](#).

This documentation contains reference information related to the following:

- [Amazon SES API Actions](#)
- [Amazon SES API Data Types](#)
- [Common Parameters](#)
- [Common Errors](#)

## Usage

```
ses(config = list(), credentials = list(), endpoint = NULL, region = NULL)
```

## Arguments

config	Optional configuration of credentials, endpoint, and/or region. <ul style="list-style-type: none"> <li>• <b>credentials:</b> <ul style="list-style-type: none"> <li>– <b>creds:</b> <ul style="list-style-type: none"> <li>* <b>access_key_id:</b> AWS access key ID</li> <li>* <b>secret_access_key:</b> AWS secret access key</li> <li>* <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>– <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>– <b>anonymous:</b> Set anonymous credentials.</li> </ul> </li> <li>• <b>endpoint:</b> The complete URL to use for the constructed client.</li> <li>• <b>region:</b> The AWS Region used in instantiating the client.</li> <li>• <b>close_connection:</b> Immediately close all HTTP connections.</li> <li>• <b>timeout:</b> The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.</li> <li>• <b>s3_force_path_style:</b> Set this to true to force the request to use path-style addressing, i.e. <code>http://s3.amazonaws.com/BUCKET/KEY</code>.</li> <li>• <b>sts_regional_endpoint:</b> Set sts regional endpoint resolver to regional or legacy <a href="https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html">https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html</a></li> </ul>
credentials	Optional credentials shorthand for the config parameter <ul style="list-style-type: none"> <li>• <b>creds:</b> <ul style="list-style-type: none"> <li>– <b>access_key_id:</b> AWS access key ID</li> <li>– <b>secret_access_key:</b> AWS secret access key</li> <li>– <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>• <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>• <b>anonymous:</b> Set anonymous credentials.</li> </ul>
endpoint	Optional shorthand for complete URL to use for the constructed client.
region	Optional shorthand for AWS Region used in instantiating the client.

## Value

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

**Service syntax**

```

svc <- ses(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
        secret_access_key = "string",
        session_token = "string"
      ),
      profile = "string",
      anonymous = "logical"
    ),
    endpoint = "string",
    region = "string",
    close_connection = "logical",
    timeout = "numeric",
    s3_force_path_style = "logical",

```

**Operations**

<a href="#">clone_receipt_rule_set</a>	Creates a receipt rule set by cloning an existing one
<a href="#">create_configuration_set</a>	Creates a configuration set
<a href="#">create_configuration_set_event_destination</a>	Creates a configuration set event destination
<a href="#">create_configuration_set_tracking_options</a>	Creates an association between a configuration set and a custom domain
<a href="#">create_custom_verification_email_template</a>	Creates a new custom verification email template
<a href="#">create_receipt_filter</a>	Creates a new IP address filter
<a href="#">create_receipt_rule</a>	Creates a receipt rule
<a href="#">create_receipt_rule_set</a>	Creates an empty receipt rule set
<a href="#">create_template</a>	Creates an email template
<a href="#">delete_configuration_set</a>	Deletes a configuration set
<a href="#">delete_configuration_set_event_destination</a>	Deletes a configuration set event destination
<a href="#">delete_configuration_set_tracking_options</a>	Deletes an association between a configuration set and a custom domain
<a href="#">delete_custom_verification_email_template</a>	Deletes an existing custom verification email template

<code>delete_identity</code>	Deletes the specified identity (an email address or a domain) from the account
<code>delete_identity_policy</code>	Deletes the specified sending authorization policy for the given identity
<code>delete_receipt_filter</code>	Deletes the specified IP address filter
<code>delete_receipt_rule</code>	Deletes the specified receipt rule
<code>delete_receipt_rule_set</code>	Deletes the specified receipt rule set and all of the receipt rules it contains
<code>delete_template</code>	Deletes an email template
<code>delete_verified_email_address</code>	Deprecated
<code>describe_active_receipt_rule_set</code>	Returns the metadata and receipt rules for the receipt rule set that is currently active
<code>describe_configuration_set</code>	Returns the details of the specified configuration set
<code>describe_receipt_rule</code>	Returns the details of the specified receipt rule
<code>describe_receipt_rule_set</code>	Returns the details of the specified receipt rule set
<code>get_account_sending_enabled</code>	Returns the email sending status of the Amazon SES account for the current region
<code>get_custom_verification_email_template</code>	Returns the custom email verification template for the template name
<code>get_identity_dkim_attributes</code>	Returns the current status of Easy DKIM signing for an entity
<code>get_identity_mail_from_domain_attributes</code>	Returns the custom MAIL FROM attributes for a list of identities (email addresses and/or domains)
<code>get_identity_notification_attributes</code>	Given a list of verified identities (email addresses and/or domains), returns the notification attributes for each
<code>get_identity_policies</code>	Returns the requested sending authorization policies for the given identities
<code>get_identity_verification_attributes</code>	Given a list of identities (email addresses and/or domains), returns the verification attributes for each
<code>get_send_quota</code>	Provides the sending limits for the Amazon SES account
<code>get_send_statistics</code>	Provides sending statistics for the current Amazon Web Services Region
<code>get_template</code>	Displays the template object (which includes the Subject line, HTML content, and plain text content)
<code>list_configuration_sets</code>	Provides a list of the configuration sets associated with your Amazon SES account
<code>list_custom_verification_email_templates</code>	Lists the existing custom verification email templates for your account
<code>list_identities</code>	Returns a list containing all of the identities (email addresses and domains) that are currently verified
<code>list_identity_policies</code>	Returns a list of sending authorization policies that are attached to the specified identities
<code>list_receipt_filters</code>	Lists the IP address filters associated with your Amazon Web Services account
<code>list_receipt_rule_sets</code>	Lists the receipt rule sets that exist under your Amazon Web Services account
<code>list_templates</code>	Lists the email templates present in your Amazon SES account in the current region
<code>list_verified_email_addresses</code>	Deprecated
<code>put_configuration_set_delivery_options</code>	Adds or updates the delivery options for a configuration set
<code>put_identity_policy</code>	Adds or updates a sending authorization policy for the specified identity
<code>reorder_receipt_rule_set</code>	Reorders the receipt rules within a receipt rule set
<code>send_bounce</code>	Generates and sends a bounce message to the sender of an email you received
<code>send_bulk_templated_email</code>	Composes an email message to multiple destinations
<code>send_custom_verification_email</code>	Adds an email address to the list of identities for your Amazon SES account
<code>send_email</code>	Composes an email message and immediately queues it for sending
<code>send_raw_email</code>	Composes an email message and immediately queues it for sending
<code>send_templated_email</code>	Composes an email message using an email template and immediately queues it for sending
<code>set_active_receipt_rule_set</code>	Sets the specified receipt rule set as the active receipt rule set
<code>set_identity_dkim_enabled</code>	Enables or disables Easy DKIM signing of email sent from an identity
<code>set_identity_feedback_forwarding_enabled</code>	Given an identity (an email address or a domain), enables or disables feedback forwarding
<code>set_identity_headers_in_notifications_enabled</code>	Given an identity (an email address or a domain), sets whether Amazon SES includes headers in notifications
<code>set_identity_mail_from_domain</code>	Enables or disables the custom MAIL FROM domain setup for a verified identity
<code>set_identity_notification_topic</code>	Sets an Amazon Simple Notification Service (Amazon SNS) topic for an identity
<code>set_receipt_rule_position</code>	Sets the position of the specified receipt rule in the receipt rule set
<code>test_render_template</code>	Creates a preview of the MIME content of an email when provided with a template
<code>update_account_sending_enabled</code>	Enables or disables email sending across your entire Amazon SES account
<code>update_configuration_set_event_destination</code>	Updates the event destination of a configuration set

<a href="#">update_configuration_set_reputation_metrics_enabled</a>	Enables or disables the publishing of reputation metrics for emails sent
<a href="#">update_configuration_set_sending_enabled</a>	Enables or disables email sending for messages sent using a specific configuration set
<a href="#">update_configuration_set_tracking_options</a>	Modifies an association between a configuration set and a custom domain
<a href="#">update_custom_verification_email_template</a>	Updates an existing custom verification email template
<a href="#">update_receipt_rule</a>	Updates a receipt rule
<a href="#">update_template</a>	Updates an email template
<a href="#">verify_domain_dkim</a>	Returns a set of DKIM tokens for a domain identity
<a href="#">verify_domain_identity</a>	Adds a domain to the list of identities for your Amazon SES account
<a href="#">verify_email_address</a>	Deprecated
<a href="#">verify_email_identity</a>	Adds an email address to the list of identities for your Amazon SES account

## Examples

```
## Not run:
svc <- ses()
# The following example creates a receipt rule set by cloning an existing
# one:
svc$clone_receipt_rule_set(
  OriginalRuleSetName = "RuleSetToClone",
  RuleSetName = "RuleSetToCreate"
)

## End(Not run)
```

---

sesv2

*Amazon Simple Email Service*

---

## Description

Amazon SES API v2

**Amazon SES** is an Amazon Web Services service that you can use to send email messages to your customers.

If you're new to Amazon SES API v2, you might find it helpful to review the [Amazon Simple Email Service Developer Guide](#). The *Amazon SES Developer Guide* provides information and code samples that demonstrate how to use Amazon SES API v2 features programmatically.

## Usage

```
sesv2(config = list(), credentials = list(), endpoint = NULL, region = NULL)
```

## Arguments

config	Optional configuration of credentials, endpoint, and/or region. <ul style="list-style-type: none"> <li>• <b>credentials:</b> <ul style="list-style-type: none"> <li>– <b>creds:</b> <ul style="list-style-type: none"> <li>* <b>access_key_id:</b> AWS access key ID</li> <li>* <b>secret_access_key:</b> AWS secret access key</li> <li>* <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>– <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>– <b>anonymous:</b> Set anonymous credentials.</li> </ul> </li> <li>• <b>endpoint:</b> The complete URL to use for the constructed client.</li> <li>• <b>region:</b> The AWS Region used in instantiating the client.</li> <li>• <b>close_connection:</b> Immediately close all HTTP connections.</li> <li>• <b>timeout:</b> The time in seconds till a timeout exception is thrown when attempting to make a connection. The default is 60 seconds.</li> <li>• <b>s3_force_path_style:</b> Set this to <code>true</code> to force the request to use path-style addressing, i.e. <code>http://s3.amazonaws.com/BUCKET/KEY</code>.</li> <li>• <b>sts_regional_endpoint:</b> Set sts regional endpoint resolver to regional or legacy <a href="https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html">https://docs.aws.amazon.com/sdkref/latest/guide/feature-sts-regionalized-endpoint.html</a></li> </ul>
credentials	Optional credentials shorthand for the config parameter <ul style="list-style-type: none"> <li>• <b>creds:</b> <ul style="list-style-type: none"> <li>– <b>access_key_id:</b> AWS access key ID</li> <li>– <b>secret_access_key:</b> AWS secret access key</li> <li>– <b>session_token:</b> AWS temporary session token</li> </ul> </li> <li>• <b>profile:</b> The name of a profile to use. If not given, then the default profile is used.</li> <li>• <b>anonymous:</b> Set anonymous credentials.</li> </ul>
endpoint	Optional shorthand for complete URL to use for the constructed client.
region	Optional shorthand for AWS Region used in instantiating the client.

## Value

A client for the service. You can call the service's operations using syntax like `svc$operation(...)`, where `svc` is the name you've assigned to the client. The available operations are listed in the Operations section.

## Service syntax

```
svc <- sesv2(
  config = list(
    credentials = list(
      creds = list(
        access_key_id = "string",
```

```

        secret_access_key = "string",
        session_token = "string"
    ),
    profile = "string",
    anonymous = "logical"
),
endpoint = "string",
region = "string",
close_connection = "logical",
timeout = "numeric",
s3_force_path_style = "logical",
sts_regional_endpoint = "string"
),
credentials = list(
  creds = list(
    access_key_id = "string",
    secret_access_key = "string",
    session_token = "string"
  ),
  profile = "string",
  anonymous = "logical"
),
endpoint = "string",
region = "string"
)

```

## Operations

<a href="#">batch_get_metric_data</a>	Retrieves batches of metric data collected based on your sending activity
<a href="#">cancel_export_job</a>	Cancels an export job
<a href="#">create_configuration_set</a>	Create a configuration set
<a href="#">create_configuration_set_event_destination</a>	Create an event destination
<a href="#">create_contact</a>	Creates a contact, which is an end-user who is receiving the email, and adds it to a contact list
<a href="#">create_contact_list</a>	Creates a contact list
<a href="#">create_custom_verification_email_template</a>	Creates a new custom verification email template
<a href="#">create_dedicated_ip_pool</a>	Create a new pool of dedicated IP addresses
<a href="#">create_deliverability_test_report</a>	Create a new predictive inbox placement test
<a href="#">create_email_identity</a>	Starts the process of verifying an email identity
<a href="#">create_email_identity_policy</a>	Creates the specified sending authorization policy for the given identity (and its associated email identities)
<a href="#">create_email_template</a>	Creates an email template
<a href="#">create_export_job</a>	Creates an export job for a data source and destination
<a href="#">create_import_job</a>	Creates an import job for a data destination
<a href="#">delete_configuration_set</a>	Delete an existing configuration set
<a href="#">delete_configuration_set_event_destination</a>	Delete an event destination
<a href="#">delete_contact</a>	Removes a contact from a contact list
<a href="#">delete_contact_list</a>	Deletes a contact list and all of the contacts on that list
<a href="#">delete_custom_verification_email_template</a>	Deletes an existing custom verification email template
<a href="#">delete_dedicated_ip_pool</a>	Delete a dedicated IP pool

<a href="#">delete_email_identity</a>	Deletes an email identity
<a href="#">delete_email_identity_policy</a>	Deletes the specified sending authorization policy for the given identity (and its associated email identities)
<a href="#">delete_email_template</a>	Deletes an email template
<a href="#">delete_suppressed_destination</a>	Removes an email address from the suppression list for your account
<a href="#">get_account</a>	Obtain information about the email-sending status and capabilities of your Amazon SES account
<a href="#">get_blacklist_reports</a>	Retrieve a list of the blacklists that your dedicated IP addresses appear on
<a href="#">get_configuration_set</a>	Get information about an existing configuration set, including the dedicated IP addresses associated with it
<a href="#">get_configuration_set_event_destinations</a>	Retrieve a list of event destinations that are associated with a configuration set
<a href="#">get_contact</a>	Returns a contact from a contact list
<a href="#">get_contact_list</a>	Returns contact list metadata
<a href="#">get_custom_verification_email_template</a>	Returns the custom email verification template for the template name you specify
<a href="#">get_dedicated_ip</a>	Get information about a dedicated IP address, including the name of the dedicated IP pool it belongs to
<a href="#">get_dedicated_ip_pool</a>	Retrieve information about the dedicated pool
<a href="#">get_dedicated_ips</a>	List the dedicated IP addresses that are associated with your Amazon Web Services account
<a href="#">get_deliverability_dashboard_options</a>	Retrieve information about the status of the Deliverability dashboard for your account
<a href="#">get_deliverability_test_report</a>	Retrieve the results of a predictive inbox placement test
<a href="#">get_domain_deliverability_campaign</a>	Retrieve all the deliverability data for a specific campaign
<a href="#">get_domain_statistics_report</a>	Retrieve inbox placement and engagement rates for the domains that you use
<a href="#">get_email_identity</a>	Provides information about a specific identity, including the identity's verification status
<a href="#">get_email_identity_policies</a>	Returns the requested sending authorization policies for the given identity (and its associated email identities)
<a href="#">get_email_template</a>	Displays the template object (which includes the subject line, HTML part and text part)
<a href="#">get_export_job</a>	Provides information about an export job
<a href="#">get_import_job</a>	Provides information about an import job
<a href="#">get_message_insights</a>	Provides information about a specific message, including the from address, to address, subject, and body
<a href="#">get_suppressed_destination</a>	Retrieves information about a specific email address that's on the suppression list
<a href="#">list_configuration_sets</a>	List all of the configuration sets associated with your account in the current region
<a href="#">list_contact_lists</a>	Lists all of the contact lists available
<a href="#">list_contacts</a>	Lists the contacts present in a specific contact list
<a href="#">list_custom_verification_email_templates</a>	Lists the existing custom verification email templates for your account in the current region
<a href="#">list_dedicated_ip_pools</a>	List all of the dedicated IP pools that exist in your Amazon Web Services account
<a href="#">list_deliverability_test_reports</a>	Show a list of the predictive inbox placement tests that you've performed, including the results
<a href="#">list_domain_deliverability_campaigns</a>	Retrieve deliverability data for all the campaigns that used a specific domain
<a href="#">list_email_identities</a>	Returns a list of all of the email identities that are associated with your Amazon SES account
<a href="#">list_email_templates</a>	Lists the email templates present in your Amazon SES account in the current region
<a href="#">list_export_jobs</a>	Lists all of the export jobs
<a href="#">list_import_jobs</a>	Lists all of the import jobs
<a href="#">list_recommendations</a>	Lists the recommendations present in your Amazon SES account in the current region
<a href="#">list_suppressed_destinations</a>	Retrieves a list of email addresses that are on the suppression list for your account
<a href="#">list_tags_for_resource</a>	Retrieve a list of the tags (keys and values) that are associated with a specific resource
<a href="#">put_account_dedicated_ip_warmup_attributes</a>	Enable or disable the automatic warm-up feature for dedicated IP addresses
<a href="#">put_account_details</a>	Update your Amazon SES account details
<a href="#">put_account_sending_attributes</a>	Enable or disable the ability of your account to send email
<a href="#">put_account_suppression_attributes</a>	Change the settings for the account-level suppression list
<a href="#">put_account_vdm_attributes</a>	Update your Amazon SES account VDM attributes
<a href="#">put_configuration_set_delivery_options</a>	Associate a configuration set with a dedicated IP pool
<a href="#">put_configuration_set_reputation_options</a>	Enable or disable collection of reputation metrics for emails that you send through the configuration set
<a href="#">put_configuration_set_sending_options</a>	Enable or disable email sending for messages that use a particular configuration set
<a href="#">put_configuration_set_suppression_options</a>	Specify the account suppression list preferences for a configuration set

<code>put_configuration_set_tracking_options</code>	Specify a custom domain to use for open and click tracking elements in email
<code>put_configuration_set_vdm_options</code>	Specify VDM preferences for email that you send using the configuration set
<code>put_dedicated_ip_in_pool</code>	Move a dedicated IP address to an existing dedicated IP pool
<code>put_dedicated_ip_pool_scaling_attributes</code>	Used to convert a dedicated IP pool to a different scaling mode
<code>put_dedicated_ip_warmup_attributes</code>	Put dedicated ip warmup attributes
<code>put_deliverability_dashboard_option</code>	Enable or disable the Deliverability dashboard
<code>put_email_identity_configuration_set_attributes</code>	Used to associate a configuration set with an email identity
<code>put_email_identity_dkim_attributes</code>	Used to enable or disable DKIM authentication for an email identity
<code>put_email_identity_dkim_signing_attributes</code>	Used to configure or change the DKIM authentication settings for an email identity
<code>put_email_identity_feedback_attributes</code>	Used to enable or disable feedback forwarding for an identity
<code>put_email_identity_mail_from_attributes</code>	Used to enable or disable the custom Mail-From domain configuration for an identity
<code>put_suppressed_destination</code>	Adds an email address to the suppression list for your account
<code>send_bulk_email</code>	Composes an email message to multiple destinations
<code>send_custom_verification_email</code>	Adds an email address to the list of identities for your Amazon SES account
<code>send_email</code>	Sends an email message
<code>tag_resource</code>	Add one or more tags (keys and values) to a specified resource
<code>test_render_email_template</code>	Creates a preview of the MIME content of an email when provided with a template
<code>untag_resource</code>	Remove one or more tags (keys and values) from a specified resource
<code>update_configuration_set_event_destination</code>	Update the configuration of an event destination for a configuration set
<code>update_contact</code>	Updates a contact's preferences for a list
<code>update_contact_list</code>	Updates contact list metadata
<code>update_custom_verification_email_template</code>	Updates an existing custom verification email template
<code>update_email_identity_policy</code>	Updates the specified sending authorization policy for the given identity (and configuration set)
<code>update_email_template</code>	Updates an email template

## Examples

```
## Not run:
svc <- sesv2()
# Cancels the export job with ID ef28cf62-9d8e-4b60-9283-b09816c99a99
svc$cancel_export_job(
  JobId = "ef28cf62-9d8e-4b60-9283-b09816c99a99"
)

## End(Not run)
```
