

Critical editions and arabic typesetting: the **ledarab** and **afoot** packages*

Peter Wilson
Herries Press[†]
Maïeul Rouquette[‡]

Abstract

The **ledmac** package, which is based on the PLAIN TeX set of **EDMAC** macros, has been used for some time for typesetting critical editions, and the **ArabTeX** system enables the typesetting of arabic texts.

The **afoot** package is an extension to the **arabtex** package to enable footnotes in arabic texts and the **ledarab** package provides an interface between **arabtex** and **ledmac** (also **ledpar**) for arabic text in critical editions.

Please, for all bug's report, open a ticket on <https://github.com/maieul/ledmac/issues/>

1 Introduction

The EDMAC macros [LW90] for typesetting critical editions of texts have been available for use with TeX for some years, and the `arabtex` package [Lag99] provides for arabic typesetting. These two works are interfaced by the `aedpatch` package provided as part of the `ArabTeX` distribution.

Following the introduction of EDMAC there had been a small but constant demand for a version that could be used with LaTeX. The `ledmac` package [Wil04a] was introduced in 2003 in an attempt to satisfy that request. This was extended in 2004 by the `ledpar` package [Wil04b] to allow the typesetting of parallel critical texts. The `ledarab` package provides an interface between the `arabtex` and the `ledmac` (and `ledpar`) packages. The package has to try and coerce TeX into paths it was not designed for. Use of the package, therefore, may produce some surprising results.

I initially used version 3.10 (2001/09/16) of the `arabtex` package but when I moved to version 3.11 (2003/08/22) I found that the code for footnotes (in `afoot.sty`) no longer worked. The `afoot` package provided here is based on the obsolete 3.10 version, until a working version¹ of `afoot.sty` is provided in the `ArabTeX` distribution.

2 The *afoot* package

The `arabtex` package automatically calls the `afoot` package. If you want to use my version of `afoot` just make sure that it is found by LaTeX before the `ArabTeX`'s version, for example by having a copy in your working directory.

The `\footnote{\{text\}}` produces a numbered footnote. Unlike the usual LaTeX `\footnote` macro there is no optional argument for specifying the number.

Inside an `arabtext` environment the `\LRfootnotes` declaration causes follow-

¹I made queries about this on the `comp.text.tex` newsgroup on 2005/01/06 but got no responses.

`\footnote`

`\LRfootnotes`

ing footnotes to be in normal left to right (LtoR) roman text, left adjusted and with the number at the left.

`\RLfootnotes` Inside an `arabtext` environment the `\RLfootnotes` or `\arabfootnotes` declaration causes any following footnotes to be in right to left (RtoL) arabic script, right adjusted and with the number at the right. In normal text the footnotes are normal.

To get an arabic footnote in normal text try:

```
...roman\footnote{\RL{arabic}}...
```

The footnote will be left adjusted but the note's text will be arabic.

3 The ledarab package

The `ledarab` package² is partially based on Klaus Lagally's `aedpatch.sty` and lets the `ledmac` package's critical apparatus be applied to arabic texts. The packages must be used in the following order:

```
\usepackage{ledmac}
\usepackage{ledpar} % if you need parallel texts.
\usepackage{arabtex}
\usepackage{ledarab}
```

The package is very limited — only the basic numbering and critical footnotes are supported. Even then, all critical notes are left adjusted with the lemma and note in left to right order, although the lemma and/or note may be in RtoL arabic script. Items like familiar footnotes, endnotes, tabulars and so on are left to you the user.

In normal numbered text you can use the `\RL` macro within the critical apparatus for short pieces of arabic.

```
\begin{numbering}
\pstart
Normal \edtext{latin}{\Cfootnote{roman}} text.
Normal \edtext{\RL{latin}}{\Cfootnote{\RL{roman}}} text.
...
```

In the first line above the lemma and footnote will both be in latin script while in the second line they will both be in arabic script; in each case, though, the lemma is at the left and the note follows on the right.

```
\begin{numbering}
\pstart
\begin{arabtext}
Arabic \edtext{script}{\Afootnote{roman}} text.
Arabic \edtext{script}{\Afootnote{\LR{roman}}} text.

```

²I offered an earlier version to Prof. Lagally towards the end of 2003 for possible addition to his `arabtex` package but got no response to my messages.

```

Arabic \edtext{script}{\Afootnote{\RL{arabic}}} text.
Arabic \edtext{LR{error}}{\Afootnote{roman}} text.
\end{arabtext}
\pend
...

```

In the first and second lines above the lemma is in arabic script and the note in latin script, while in the third line both the lemma and the note are in arabic script. Using `\LR` as part of the lemma, as in the last line causes errors.

```

\begin{numbering}
\begin{arabtext}
\pstart
Arabic \edtext{script}{\Afootnote{messy}} text.
Arabic \edtext{script}{\Afootnote{\LR{messy}}} text.
Arabic \edtext{script}{\Afootnote{\RL{arabic}}} text.
\pend
\end{arabtext}
...

```

In the first two lines above the lemma is in arabic and the note is in what looks like (to me at least) arabic, but it is all messed up. In the last line both the lemma and the note are in arabic.

`\arablnumrep` Line numbers are normally typeset in latin script arabic numerals and LtoR. Following the `\arablnumrep` declaration they will be typeset in arabic script numerals and RtoL. The `\restorelnumrep` ensures the regular line numbers. Use the declarations like:

```

\arablnumrep
\begin{arabtex} ... \end{arabtex}
\restorelnumrep

```

`\latinarabic` `\arabiclatin` Arabic script naturally has a greater height or leading (larger `\baselineskip`) than latin text. Parallel normal texts and parallel arabic texts align naturally, as do parallel columns of latin/arabic or arabic/latin texts. However, left to their own devices pages of parallel arabic and normal text will not align.

If you are setting normal text on the left pages and arabic script on the right using the `\latinarabic` declaration should align them. Similarly when you have arabic script on the left and latin script on the right use the `\arabiclatin` declaration.

`\ledarabstrut` The `\ledarabstrut` strut is the height of a line of arabic script and is used to increase the height of latin text lines to match arabic script lines. The definition is:
`\newcommand*\ledarabstrut{\rule[-1ex]{0pt}{4ex}}`
If it does not quit match the arabic script in your case then change the `4ex` appropriately.

The macro `\savestruts` saves the current definitions of the struts used in the left and right texts (`\latinarabic` and `\arabiclatin` change these). The macro `\restorestruts` set the definitions of the left and right struts to match those stored by the last `\savestruts`. The package calls `\savestruts` itself to store the default struts.

For example, with regular text on the left and arabic on the right then the general scheme is:

```
\savestruts
\begin{pages}
\begin{Leftside}
\begin{numbering}
\pstart
    normal text
    ...
\end{Leftside}
\begin{Rightside}
\begin{arabtext}
\begin{numbering}
\pstart
    arabic text
    ...
\end{numbering}
\latinarabic
\Pages
\restorestruts
\end{Rightside}
\end{pages}
```

In the above, if it had been:

```
\begin{arabtext}
\Pages
\end{arabtext}
```

Then a redefinition of `\ledarabstrut` as:

```
\renewcommand*{\ledarabstrut}{\rule[-1ex]{0pt}{3.75ex}}
```

might provide better alignment of the latin text with the arabic.

Life gets complicated regarding lemmas and notes when there are parallel latin and arabic texts. Consider that there are the following left (latin) and right (arabic) texts

```
\begin{Leftside}
...
1) \edtext{latin}{\Afootnote{roman}}...
2) \edtext{\RL{latin}}{\Afootnote{\RL{roman}}}...
3) \edtext{\LR{latin}}{\Afootnote{\LR{roman}}}...
...
\end{Leftside}
\begin{Rightside}
\begin{arabtext}
```

```

...
A) \edtext{script}{\Bfootnote{arabic}}...
B) \edtext{script}{\Bfootnote{\RL{arabic}}...}
C) \edtext{script}{\Bfootnote{\LR{arabic}}...}
...
\end{Rightside}

```

and they are to be output as matching pages. If they are output simply as:

\Pages

then the lemmas and notes for the marked lines are:

- 1) latin lemma, latin note
- 2) arabic lemma, arabic note
- 3) latin lemma, latin note
- A) arabic lemma, latin note
- B) arabic lemma, arabic note
- C) arabic lemma, latin note

On the otherhand, if they are output via:

\begin{arabtext} \Pages \end{arabtext}

then the lemmas and notes for the marked lines are:

- 1) latin lemma, messed arabic note
- 2) arabic lemma, arabic note
- 3) latin lemma, messed arabic note
- A) arabic lemma, messed arabic note
- B) arabic lemma, arabic note
- C) arabic lemma, messed arabic note

4 The *afoot* implementation

The *afoot* package is effectively an extraction from the *alatex* package of *ArabTeX*, v3.10, 2000/05/08.

Announce the name and version of the package, which is targetted for *LaTeX2e*.

```

1 {*afoot}
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{afoot}[2005/03/24 v0.1 PW's version of ArabTeX's afoot.sty]
4

```

The package redefines the internals of the *LaTeX* \footnote macro along the lines of the \vfootnote macro in *PLAIN T_EX*. It also does some things a bit differently if the *fnptra* package has been used.

\@makefntext I don't know why this is here as it is also defined as part of the \@footnotetext macro below.

```

5 \ifx \footglue \undefined % normal case
6 \else % fnpara.sty is present
7   \long\def\@makefntext#1{$^{\@thefnmark}$}\nobreak
8 \fi
9

```

```

\@footnotetext
10 %%% Make the LaTeX \cs{footnote} catcode-safe, like in Plain TeX.
11
12 \def \@footnotetext {%

5 The ledarab implementation

The ledarab package is based on the original aedpatch from the **ArabTeX** distribution.

Announce the name and version of the package, which is for **LaTeX2e**.

```

101 <*ledarab>
102 \NeedsTeXFormat{LaTeX2e}
103 \ProvidesPackage{ledarab}[2005/03/24 v0.1 Cooperation between arabtex and ledmac]
104

```

\tr@ce@n I think, but don't know, that by appropriate (re)definitions of these you can
 \tr@ce@ff get arabtex to produce some tracing of what is going on, perhaps by setting
 \tracingmacros to 1 instead of 0.

```
105 \providecommand*\{\tr@ce@n\}{\tracingmacros 0}
106 \providecommand*\{\tr@ce@ff\}{\edef \tr@ce@n
107 {\nxp\tracingmacros \the\tracingmacros }\tracingmacros 0}
108 \let \tr@ce@n \relax
109
```

\if@l@dparpack We need a flag for knowing if ledpar is being used.
 \@l@dparpacktrue 110 \newif\if@l@dparpack

 112 \@ifpackageloaded{ledpar}{\@l@dparpacktrue}{\@l@dparpackfalse}
 113

5.1 Adjusting the baselines

\do@linehook Arabic lines are taller than roman lines, so add some height to numbered lines.
 114 \renewcommand*\{\do@linehook\}{%
 115 \advance\baselineskip 1ex}
 116

\arabledparfixi If the ledpar package is loaded we have to change several of its macros. We can't do this simply within an \if@l@dparpack because of the internal \ifs. Hence, we define a macro whose expansion is the necessary changes.

```
117 %%%%%%%%%%%%%%% ledpar fix %%%%%%%%%%%%%%%
118 \newcommand{\arabledparfixi}{%
```

\do@lineLhook Increase the height of numbered lines.
 \do@lineRhook 119 \renewcommand*\{\do@lineLhook\}{%
 120 \advance\baselineskip 1ex}
 121 \renewcommand*\{\do@lineRhook\}{%
 122 \advance\baselineskip 1ex}

\a@l@dparparamsL Variations on \a@parparams from ArabTeX's aoutput.sty. These are required to
 \a@l@dparparamsR take account of the differing widths, by setting \a@hsize appropriately.

```
123 \newcommand*\{\a@l@dparparamsL\}{%
124   \ifnum \parshape = \z@
125     \a@hsize \Lcolwidth
126     \a@leftmargin \z@
127   \else
128     \a@hsize \Lcolwidth \a@leftmargin \totallleftmargin
129   \fi
130   \a@leftmargin \z@
131   \a@prevgraf \z@ \spreadfalse }
132 \newcommand*\{\a@l@dparparamsR\}{%
133   \ifnum \parshape = \z@
134     \a@hsize \Rcolwidth
```

```

135      \a@leftmargin \z@
136  \else
137      \a@hsize \Rcolwidth \a@leftmargin \atotallleftmargin
138  \fi
139  \a@leftmargin \z@
140  \a@prevgraf \z@ \spreadfalse }

\Leftsidehook
\Rightsidehook 141 \renewcommand*{\Leftsidehook}{%
142   \let\aa@parparams\aa@l@dparparamsL}
143 \renewcommand*{\Rightsidehook}{%
144   \let\aa@parparams\aa@l@dparparamsR}

\ledarabstrut In order to get parallel arabic and normal texts to line up a strut has to be
\ledstrutL added to each latin line to hide their different heights; this is \ledarabstrut.
\ledstrutR The commands \savestruts and \restorestruts save and restore the original
\savestruts left/right strut definitions. The declaration \latinarabic is for left and right
\restorestruts texts being latin and arabic, and for left arabic and right latin use \arabiclatin.

\latinarabic 145 \newcommand*{\ledarabstrut}{%
\arabiclatin 146   \rule[-1ex]{0pt}{4ex}}
147 \newcommand*{\savestruts}{%
148   \let\oldl@dstr@tL\ledstrutL
149   \let\oldl@dstr@tR\ledstrutR}
150 \newcommand*{\restorestruts}{%
151   \let\ledstrutL\oldl@dstr@tL
152   \let\ledstrutR\oldl@dstr@tR}
153 \newcommand*{\latinarabic}{%
154   \def\ledstrutL{\ledarabstrut}%
155   \def\ledstrutR{}}
156 \newcommand*{\arabiclatin}{%
157   \def\ledstrutL{}%
158   \def\ledstrutR{\ledarabstrut}}
159

At last, the end of \arabledparfixi.
160 }% end of \newcommand{\arabledparfixi}{...

\@arabic \arablinenumr@p Provide \@arabic (for setting numbers to be typeset as arabic numerals in the
\arablinenumr@p latin script) as an arabic macro. \arablinenumr@p{\(num)} typesets {\(num)} as
arabic numerals in the arabic script (and RtoL).
241 \all@w@nef{\@arabic}
242 \newcommand*{\arablinenumr@p}[1]{\RL{\@arabic{#1}}}
243

\linenumrep Ensure that \linenumrep and \sublinenumrep typeset (sub)line numbers as nor-
\sublinenumrep mal LtoR arabic in latin script. The declaration \arablnumrep causes line num-
\arablnumrep bers to be typeset RtoL in arabic script and \restorelnumrep puts them back to
\restorelnumrep LtoR in latin script.
244 \def\linenumrep#1{\LR{\@arabic{#1}}}
245 \let\oldlinenumrep\linenumrep
246 \def\sublinenumrep#1{\LR{\@arabic{#1}}}
247 \let\oldsublinenumrep\sublinenumrep
248 \newcommand*{\arablnumrep}{\global\let\linenumrep\arablinenumr@p
249 \global\let\sublinenumrep\arablinenumr@p}

267

```

5.4 More critical commands in arabic text

```

\edlabel Allow more ledmac commands in Arabic text. These take no parameters.
\edpageref
\xpageref
\lineref
\xlineref
\sublineref
\xsublineref

```

```

268 %%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
269 \all@w@ne{\edlabel}
270 \all@w@ne{\edpageref}
271 \all@w@ne{\xpageref}
272 \all@w@ne{\lineref}
273 \all@w@ne{\xlineref}
274 \all@w@ne{\sublineref}
275 \all@w@ne{\xsublineref}

\edindex And more, taking one parameter.
\typeout 276 \all@w@ne{\edindex}
          277 \all@w@ne{\typeout}

\edmakelabel And more, taking two parameters.
\xxref 278 \all@wtw@{\edmakelabel}
          279 \all@wtw@{\xxref}
          280

\Columns Also enable \Columns and \Pages as arabic text commands.
\Pages 281 \if@l@dparpack
          282   \all@wcmd{\Columns}
          283   \all@wcmd{\Pages}
          284 \fi
          285

```

6 The End

This is the end of the package code, but first use `ledarabpatch.sty` if it exists.

```

286 \InputIfFileExists{ledarabpatch.sty}
287
288 </ledarab>

```

A Examples

This section presents some sample documents.

The figures are from processed versions of the files. Having latexed a file I used `dvips` to get Encapsulated PostScript, then the `epstopdf` script to get a PDF version as well. For example:

```

> latex egarab
> latex egarab
> latex egarab
> dvips -E -o egarab.eps egarab % produces egarab.eps
> epstopdf egarab.eps           % produces egarab.pdf

```

For those who aren't fascinated by LaTeX code I show the typeset results first, then the code that produced them. I know nothing about arabic so these are not part of any publishable work and are unlikely to have any connection with the arabic language.

Can we have non-arabic text in \edtext

In roman text you can have critical notes.

1

In ازیج تخت you can have critical notes.

2

In latin you can have critical notes.

3

In ازیج تخت you can have critical notes.

4

Here the order is \begin{numbering} \pstart \begin{arabtext} ...

لِدَعْ اس وُنْدِرْفُلْ اند مُس ازیج تخت اس ازیج 1

اَنْد ازیج تخت يَا حَنْ دُ عَرِتَحَلْ نُسِس هِرْ 2

Here the order is \begin{numbering} \begin{arabtext} \pstart ...

لِدَعْ اس وُنْدِرْفُلْ اند مُس ازیج تخت اس ازیج ١

اَنْد ازیج تخت يَا حَنْ دُ عَرِتَحَلْ نُسِس هِرْ ٢

1 roman] not arabic

2 [ازیج تخت]

3 latin - فُتْنَتْ

4 ازیج تخت - فُتْنَتْ [ازیج تخت]

1 [ازیج تخت] Arabic text — footnote

2 ازیج تخت - فُتْنَتْ [ازیج تخت]

خ بِرْجِرْ، --- خ بِرْجِرْ خا [ازیج تخت] ١

ازیج تخت - فُتْنَتْ [ازیج تخت] ٢

Figure 1: Output from egarab.tex

Here is an example pair of texts. The arabic version is on the right.

1	gUyand kasAn behe st bA .hUr hOs	گويند کسان يه سٽ با حور هوس
2	ast	است 2r
3	man mIgUyam keh 'Ab-i angUr hOs	من ميگويم كه آب انگور هوس
4	ast	است 4r
5	In naqd begIr wa-dast az 'An ne-	اين نقد بگير ودست از آن نسيه
6	siyeh bedAr	بدار 6r
7	k-'AwAz-i dohol sanIdan az dUr	کواز دهل سيندين از دور هوس
8	hOs ast.	است. 8r

The same texts but more oriented towards arabic.

9	gUyand kasAn behe st bA .hUr hOs	به گويند کسان يه سٽ با حور هوس
10	ast	است 10r
11	man mIgUyam keh 'Ab-i angUr hOs	من ميگويم كه آب انگور هوس
12	ast	است 12r
13	In naqd begIr wa-dast az 'An ne-	اين نقد بگير ودست از آن نسيه
14	siyeh bedAr	بدار 14r
15	k-'AwAz-i dohol sanIdan az dUr	کواز دهل سيندين از دور هوس
16	hOs ast.	است. 16r

1 st] Western side

11 keh] واسِتن سِد

1r ياسِتن سِد [كِه رِّي [ست

A.1 General example

The result of the following code is shown in Figure 1. The arabic script is non-sensical to anyone who can read Arabic as it is just the English text represented using the arabic script.

The example illustrates a variety of critical notes, including one that is all messed up just to show that some things do not work.

```

289 <*egarab>
290 %%% egarab.tex
291 \documentclass[12pt]{article}
292 \addtolength{\textheight}{-10\baselineskip}
293 \usepackage{ledmac}
294 \setcounter{firstlinenum}{1} \setcounter{linenumincrement}{1}
295 \linenummargin{right}
296
297 \usepackage{arabtex}
298 \usepackage{ledarab}
299
300 \begin{document}
301
302 Can we have non-arabic text in \verb?\edtext?
303
304 \begin{numbering}
305 \pstart
306 \noindent
307 In \edtext{roman}{\Afootnote{not arabic}} text you
308 can have critical notes. \\
309 In \edtext{\RL{Arabic text}}{\Afootnote{not roman}} you
310 can have critical notes. \\
311 In \edtext{latin}{\Afootnote{\RL{Arabic text --- footnote}}} you
312 can have critical notes. \\
313 In \edtext{\RL{Arabic text}}{\Afootnote{\RL{Arabic text --- footnote}}} you
314 can have critical notes.
315 \pend
316 \end{numbering}
317
318 Here the order is \verb?\begin{numbering}\pstart\begin{arabtext}...?
319
320 \begin{numbering}
321 \pstart
322 \begin{arabtext}
323 ledmac is wonderful and so
324 %%% arabic lemma, latin note
325 \edtext{Arabic text}{\Bfootnote{Arabic text --- footnote}} is arabtex\\
326 %%% arabic lemma, arabic note
327 and \edtext{Arabic text}{\Bfootnote{\RL{Arabic text --- footnote}}} you
328 can do critical notes here.
329 \end{arabtext}
330 \pend

```

```

331 \endnumbering
332
333 Here the order is \verb?\beginnumbering \begin{arabtext} \pstart...?
334
335 \arablnumrep
336 \beginnumbering

338 \pstart
339 ledmac is wonderful and so
340 %% arabic lemma, screwed up arabic note
341 \edtext{Arabic text}{\Cfootnote{Arabic text --- footnote}} is arabtex\ \
342 %% arabic lemma, arabic note
343 and \edtext{Arabic text}{\Cfootnote{\RL{Arabic text --- footnote}}} you
344 can do critical notes here.
345 \pend
346 \end{arabtext}
347 \endnumbering
348 \restorelnumrep
349
350 \end{document}
351 
```

A.2 Parallel example

The result of the following code for parallel typesetting is shown in Figure 2. The left and right inputs are the same. In this case the arabic script should make sense to an Arabic reader while the English text is the input that would produce the arabic if it were inside the `arabtex` environment. The text for the example is from `omar.tex` in the `ArabTeX` distribution; I do not know what it means.

The two examples are virtually the same except that in the second the numbering is in arabic script instead of latin script. Note that the usual variety of footnotes can be used for arabic texts as well as western texts.

```

352 {*egarabpar}
353 %% egarabpar.tex  ledmac & parallel arabic text
354 \documentclass[12pt]{article}
355 \addtolength{\textheight}{-4\baselineskip}
